INTRODUCTION

On September 7, 2016, four of the nation’s newspapers of record weighed in on the connected crises in crime and policing. The *New York Times* revealed the tensions between the Mayor’s office in Chicago and several community and professional groups over a plan to overhaul Chicago’s police disciplinary board—a plan developed in the wake of the shooting of an unarmed teenager, Laquan McDonald, and the release of a video of that killing.¹ The *Wall Street Journal* related a vigorous defense of New York City’s “broken windows” policing strategy—a strategy that has been a recurring source of tension between the city’s minority com-

** Paul J. Kellner Professor of Law, Columbia Law School. Huge thanks to Kyla Magun and Remy Grosbard for all their patience and help. Thanks to Darrel Stephens who generously shared recent data on city-level homicides. Patricio Martinez-Llompart provided excellent research assistance. Special thanks to Nathan Hess for excellent cartography. All opinions and errors are our own.

1. Richard A. Oppel Jr., Chicago’s Plan to Toughen Oversight of Police Is Under Fire, *N.Y. Times* (Sept. 7, 2016), <http://nyti.ms/2cq020E> (on file with the *Columbia Law Review*) [hereinafter Oppel, Plan Under Fire].

munities and the police, and whose value in crime reduction has been sharply debated.² The *Washington Post's* lead editorial decried Chicago's "deadliest month in two decades" that left city officials at odds over the basic elements of public safety policy and strategic responses to the seemingly intractable violence.³ The *Chicago Tribune* weighed in as well. In it, Chicago Police Superintendent Eddie Johnson declared that the crisis is "not a police issue, it's a society issue," pointing to the need for stricter gun controls.⁴

I. EXPLORING THE TENSION BETWEEN POLICE AND COMMUNITIES

Violence and homicide are both community and police issues in every city; they are also political and managerial challenges for mayors and local government. Yet shared concerns can be sites of contestation, not collaboration. Consider Chicago, where homicides jumped from 423 in 2014 to 762 in 2016,⁵ while nonfatal shootings also spiked from 2,599⁶ to 3,550⁷ during the same period. Chicago's spike in shootings and homicides became a political question in the 2016 presidential election.⁸ The city's turmoil over its devastating homicide and shooting rates, and reports of a police pullback in the midst of this crisis,⁹ are framed by

deep community distrust of the police in the wake of fatal police shootings,¹⁰ as well as by strong resistance from police unions to community and city efforts to strengthen civilian oversight of police and increase discipline of police officers who violate law and policy.¹¹ For example, just a few days after August ended with sixty-eight homicides in the city, Chicago's police union, the Chicago Fraternal Order of Police, urged its officers not to work overtime shifts on the 2016 Labor Day holiday weekend.¹² The timing of this pointed expression of police resistance and defiance in the midst of a crisis of violence suggests the depth of the social and political conflict between the community, the police, and the city government. And while it is hard to link this resistance to police conduct on the street, there was indeed evidence of a police pullback in the form of reduced street stops.¹³

13. Kapustin et al., *supra* note 9, at 24.

Chicago is not alone in its crisis and in its conflicts between citizens and police. Baltimore was the scene of three days of demonstrations—sometimes violent—following Freddie Gray’s arrest, his death while in police custody, and his funeral.¹⁴ Gray’s death occurred in 2015, a year when Baltimore’s 344 homicides set a modern record¹⁵ before tapering off in 2016 to 318. That total made 2016 the second-deadliest year on record.¹⁶ Reports from Baltimore suggested a police pullback,¹⁷ similar to Chicago, following the indictments of six officers who were participants in Gray’s arrest and eventual death in custody.¹⁸ The rancor between police and city government peaked after the acquittal of the first four of the officers tried¹⁹ and was followed by lawsuits by the officers against the State Attorney, alleging defamation and malicious prosecution among other claims.²⁰ The demands by the police in Baltimore go well beyond civil damages: Officers and their union representatives have called for the disbarment of the elected former prosecutor, a sign of the depth of the enmity between police and government as well as between police and citizens.²¹

A. *Factors Producing Tension Between Communities and Police*

Three factors drive tensions between citizens, rank-and-file police, and big-city mayors in these and other cities: police officers’ resentment of both political and community pushback, rank and file hostility to legal interventions and reform, and increased police killings and use of force, particularly in communities of color.

First, in the wake of events such as the Freddie Gray homicide or the revelations of the police-shooting death of Laquan McDonald in Chicago,²² criticism of the police in cities across the country sparked acrimony among police officers—not only toward local politicians who were critical of police but also toward their own managers, who tended to join in that criticism.²³ A Pew Research Center survey of police officers shows that both the protests against the police and an increase in the number of fatal attacks on police in recent years²⁴ have made them worry more about their personal safety.²⁵ Police officer fatalities rose from 123 in 2015 to 135 in 2016, a 10% increase.²⁶ But this is a lower death toll than the 177 officers killed in 2011 and the 192 officers killed in 2007.²⁷ Despite the decline in killings of police, a small number of recent premeditated ambushes likely have an outsized effect on police fears.²⁸ The Pew survey also shows that the anecdotal reports of police pullbacks in Chicago and Baltimore reflect a widely shared view among police: 72% say officers in their department are now less willing to stop and question

28. Christopher Ingraham, *Ambush Killings of Police Officers Has Hit a 10-Year High*, Wash. Post: Wonkblog (Nov. 21, 2016), http://wapo.st/2fyiBjk?tid=ss_tw-bottom [<http://perma.cc/3KNG-53Z8>]; Joe Mzingo, *The Cases Might Be Rare, but These Are the Killers Cops Fear Most*, L.A. Times (Oct. 12, 2016, 9:50 PM), <http://www.latimes.com/nation/la-na-cop-killers-snap-story.html> (on file with the *Columbia Law Review*); see also George Fachner & Zoë Thorkildsen, *Cnty. Oriented Policing Servs., Ambushes of Police: Environment, Incident Dynamics, and the Aftermath of Surprise Attacks Against Law Enforcement* 71 (2015), <http://ric-zai-inc.com/Publications/cops-p340-pub.pdf> [<http://perma.cc/83KK-7SH6>] (finding violent crime and violence against the police correlate with ambushes against police at the jurisdictional level and progressive hiring practices were associated with lower numbers of ambushes).

suspicious persons.²⁹ Overall, more than eight in ten (86%) say police work is harder today as a result of high-profile incidents of officer shootings of citizens and officer fatalities.³⁰

Second, beyond local politics and tensions, sentinel events in Chicago and Baltimore led to federal interventions that reified criticism of the police and increased police resentment of such interventions. Within a year of the trials of the officers in the Freddie Gray homicide and five months after the Chicago police union urged defiance over Labor Day weekend, both Baltimore³¹ and Chicago³² completed negotiations with the Department of Justice (DOJ) to develop and implement consent decrees to undertake reforms in policy and practice—reforms that promise structural changes, remediation of constitutional violations, and healing of breaches between police and community.³³ Chicago and Baltimore are two of twenty-five investigations that the Special Litigation Section of the Civil Rights Division (CRD) of the DOJ conducted under 42 U.S.C. § 14141 since 2009.³⁴ The CRD opened and is currently enforcing nineteen agreements—including fourteen consent decrees and one postjudgment order—in counties and state agencies

29. Morin et al., *supra* note 23, at 4.

30. *Id.* at 15.

31. See Consent Decree, *United States v. Police Dep't of Balt.*, No. 1:17-cv-00099-JKB (D. Md. Jan. 12, 2017), <http://www.justice.gov/crt/case-document/file/925036/download> [<http://perma.cc/URB7-XLUK>]; see also Camila Domonoske, Baltimore, DOJ Reach Agreement on Consent Decree for Baltimore Police, NPR (Jan. 12, 2017, 10:56 AM), <http://www.npr.org/sections/thetwo-way/2017/01/12/509479934/baltimore-doj-reach-agreement-on-consent-decree-for-baltimore-police> [<http://perma.cc/TAC3-FRMQ>] (reporting Baltimore agreed to the consent decree to “institute sweeping reforms in Baltimore’s police department”).

32. Justice Department Announces Findings of Investigation into Chicago Police Department, U.S. Dep’t of Justice (Jan. 13, 2017), <http://www.justice.gov/opa/pr/justice-department-announces-findings-investigation-chicago-police-department> [<http://perma.cc/9W5F-D4SC>].

33. The future implementation of these agreements is uncertain. In response to questions about the Chicago consent decree during his confirmation hearing for Attorney General, Senator Jeff Sessions refused to commit to honoring the agreement. See Senate Comm. on the Judiciary, Nomination of Jeff Sessions to Be Attorney General of the United States, Questions for the Record, Questions from Senator Durbin 4 (2017), <http://www.judiciary.senate.gov/imo/media/doc/Sessions%20Responses%20to%20Durbin%20QFRs.pdf> [<http://perma.cc/L3HJ-NPFJ>] (“[T]here are concerns with the impact of using consent decrees for policy purposes and that caution should be used in these cases.”). In Baltimore, the DOJ has sought a postponement of a hearing to finalize the details of the consent decree and delay implementation of the agreement to allow for time to brief the presidential administration on the proposed agreement. See Kevin Rector, Consent Decree Hearing Postponed to Give Justice Department Time to Brief Trump Administration on Agreement, *Balt. Sun.* (Jan. 20, 2017, 6:52 PM), <http://www.baltimoresun.com/news/maryland/baltimore-city/bs-md-ci-consent-decree-delay-20170120-story.html> (on file with the *Columbia Law Review*).

34. See Special Litigation Section Cases and Matters, U.S. Dep’t of Justice, <http://www.justice.gov/crt/special-litigation-section-cases-and-matters0#police> [<http://perma.cc/V99M-FLK7>] (last visited Feb. 4, 2017).

that are under federal court supervision to implement such agreements.³⁵ Since the inception of “pattern and practice” interventions in the 1990s, a total of forty police agencies have entered into either stipulated settlements or consent decrees, committing local police to a series of court-supervised structural and policy reforms.³⁶ These agreements between local entities and the DOJ require extensive changes in policy and practice—and in some cases structural changes in functions including recruitment and discipline—and a cessation of the constitutional violations that precipitated the interventions.³⁷

Police officers often view DOJ interventions and other efforts aiming to enhance police accountability and constitutional compliance as a condemnation of their police work.³⁸ These reform efforts can provoke resentment among the rank and file (and union leadership) and some bitterness at the labeling of their actions as extralegal or tinged with racism.³⁹ In some places, police have pushed back. Officers in Seattle sought court intervention to stop the implementation of new use of force guidelines that were created through the 2012 DOJ consent decree.⁴⁰ In Boston, no officers answered the Commissioner’s call for volunteers to conduct a pilot program to test the use of body-worn cameras.⁴¹ When

the Commissioner ordered 100 officers to participate,⁴² the Boston Police Patrolmen's Association (BPPA) tried to halt the program (unsuccessfully).⁴³

In New York City, police unions asserted that court-ordered measures aimed at accountability violate their collective bargaining rights. They used this argument in an unsuccessful motion to intervene and overturn the settlement and order resulting from *Floyd v. City of New York*, a 2013 opinion finding Fourth and Fourteenth Amendment violations in the New York City Police Department's (NYPD's) "stop-and-frisk" program.⁴⁴ The Second Circuit denied the intervenor motion, citing the city's right to voluntarily dismiss its own appeal of the case while also reinforcing the boundaries of management prerogatives in the collective bargaining issues.⁴⁵ Indeed, the panel expressed "serious reservations about the prospect of allowing a public-sector union to encroach upon a duly-elected government's discretion to settle a dispute against it."⁴⁶ These episodes of police resistance—if not defiance—reveal tensions not just between communities and police but also between police and elected officials in the executive branches over police discretion in everyday tactical decisions and, more generally, over the autonomy of police to craft strategies for controlling crime.

Third, the connection between race, aggressive police tactics, and police killings has widened the breach in trust between citizens and police—especially Black citizens and police.⁴⁷ Police killings, often highly publicized and increasingly visible on citizen or police videos, have

47. See Carl Bialik, *Why Are So Many Black Americans Killed by Police?*, FiveThirtyEight (July 21, 2016, 1:24 PM), <http://fivethirtyeight.com/features/why-are-so-many-black-americans-killed-by-police/> [<http://perma.cc/T567-NAB9>] (exploring why "Black Americans are more than twice as likely as white Americans to be killed by police officers").

sparked intense anger in Black communities.⁴⁸ The *Washington Post* counted 963 persons shot and killed by police in 2016, a 5% decline from the 991 killings in 2015.⁴⁹ Other crowd-sourced websites provide slightly different counts, which differ from the accounts of newspapers in small ways owing to differences in inclusion rules, the availability of details of the incidents, and the time windows for each data source.⁵⁰ However, all agree that official government records, which rely on voluntary reporting by police agencies, substantially undercount police shootings.⁵¹

48. Daniel Funke & Tina Susman, *From Ferguson to Baton Rouge: Deaths of Black Men and Women at the Hands of Police*, L.A. Times (July 12, 2016, 3:45 PM), <http://www.latimes.com/nation/la-na-police-deaths-20160707-snap-htmlstory.html> (on file with the *Columbia Law Review*) (detailing encounters of Black men and women who died following encounters with police between 1999 and 2016, noting the existence of recordings in some cases and describing community responses); see also Carol E. Lee, *Obama Says Police Killings of Two Black Men Should Trouble All Americans*, Wall. St. J. (July 7, 2016, 8:47 PM), <http://www.wsj.com/articles/two-police-killings-of-black-men-part-of-pattern-of-racial-disparity-obama-says-1467919272> (on file with the *Columbia Law Review*) (recounting President Obama's statements highlighting the feelings of injustice that communities of color have felt following police shootings).

49. Fatal Force, Wash. Post, <http://wapo.st/police-shootings-2016> [<http://perma.cc/Y9U6-BNNX>] (last visited Feb. 4, 2017). Comprehensive and reliable data on nonfatal police shootings are nonexistent, although some cities maintain databases that track police shootings. See, e.g., BPD Officer Involved Use of Force, Open Balt. (Feb. 2, 2017), <http://data.baltimorecity.gov/Public-Safety/BPD-Officer-Involved-Use-Of-Force/3w4d-kckv> [<http://perma.cc/QBJ3-LF8J>].

50. See Franklin E. Zimring, *How Many Killings by Police*, 2016 U. Chi. Legal F. 691, 701–04 [hereinafter Zimring, *How Many Killings*] (explaining the shortcomings of various reporting methodologies); Joscha Legewie & Jeffrey Fagan, *Group Threat, Police Officer Diversity and the Deadly Use of Police Force* 61 tbl.A1 (Columbia Law Sch. Pub. Law & Legal Theory Working Paper Grp., Working Paper No. 14-512, 2016), <http://ssrn.com/abstract=2778692> (on file with the *Columbia Law Review*) (comparing data sources on police killings). For example, the website <http://www.killedbypolice.net/> reported that 1,151 people were killed by police in 2016, nearly 200 more deaths than were reported by the *Washington Post* for the same year. See Fatal Force, *supra* note 49; Killed by Police 2017, [Killedbypolice.net](http://www.killedbypolice.net/), <http://www.killedbypolice.net/> [<http://perma.cc/GR7T-UQEN>] (last visited Feb. 4, 2017). This website reported 776 police killings of citizens in 2013 and 1,111 in the following year. Killed by Police 2013, [Killedbypolice.net](http://www.killedbypolice.net/kbp2013.html), <http://www.killedbypolice.net/kbp2013.html> [<http://perma.cc/5UG2-HTYL>] (last visited Feb. 26, 2017); Killed by Police 2014, [Killedbypolice.net](http://www.killedbypolice.net/kbp2014.html), <http://www.killedbypolice.net/kbp2014.html> [<http://perma.cc/RKH7-FCS2>] (last visited Feb. 26, 2017). The one-year disparity no doubt reflects increased attention to police killings and more detailed reporting on incidents. See, e.g., Eliot C. McLaughlin, *We're Not Seeing More Police Shootings, Just More News Coverage*, CNN (Apr. 21, 2015), <http://cnn.it/1GbjQN9> [<http://perma.cc/AAG9-27QG>].

51. See Zimring, *How Many Killings*, *supra* note 50, at 703 (asserting media reporting of police killings is more comprehensive than police data that “report only the police department’s version of events”); see also Franklin E. Zimring & Brittany Arsiniega, *Trends in Killings of and by Police: A Preliminary Analysis*, 13 Ohio St. J. Crim. L. 247, 251 (2015) (“[T]he published count of killings by police is incomplete, unaudited, and varies between sources; estimates say that these killings are underreported by as much as 20%.”). For an in-depth discussion of the limitations of the federal data on police killings, see Daniel Bier, *By The Numbers: How Often Do Cops Kill?*, *Skeptical Libertarian* (July 13, 2016), <http://blog.skepticallibertarian.com/2016/07/13/by-the-numbers-how-often-do>

FIGURE 1: POLICE JUSTIFIABLE HOMICIDES AND POLICE OFFICERS KILLED IN THE LINE OF DUTY, 2000 TO 2015

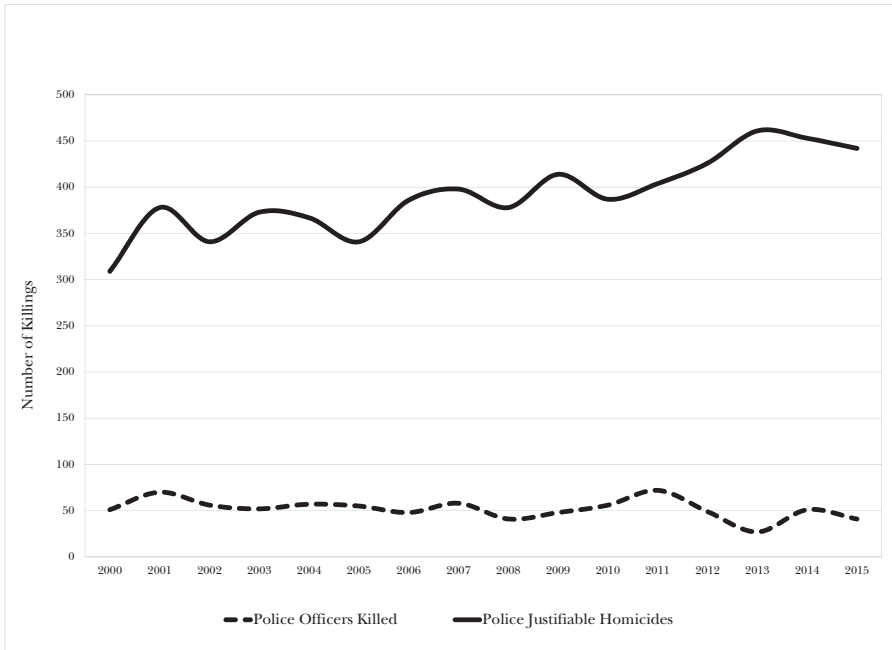

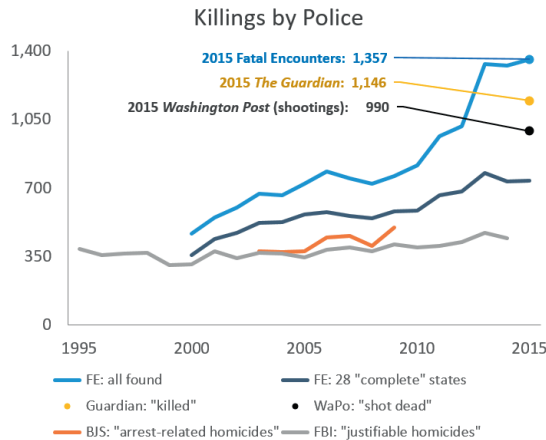

Figure 1⁵² shows the trends since 2000 in police killings of civilians and killings of police in the line of duty. If both of these types of killings

cops-kill/ [http://perma.cc/WXT7-VP99]. In this graph, Daniel Bier compares crowd-sourced datasets from the *Guardian*, the *Washington Post*, and the website “Fatal Encounters” with statistics from the Bureau of Justice Statics and the FBI. Id.

52. For data on police justifiable homicides see, FBI, Expanded Homicide Data Table 14, 2006–2010, FBI: Unif. Crime Reporting, <http://ucr.fbi.gov/crime-in-the>

are a source of tension and conflict between police and communities, then there is an asymmetry in the reactions to them. Figure 1 shows justifiable homicides by police in order to provide a longer trend line in police killings. These are widely regarded as an undercount of police killings, including both justifiable homicides and other police killings of citizens.⁵³ The trend lines in Figure 1 are moving in different directions. Killings *of* police vary from year to year, but the overall trend line shows a decline since 2000.⁵⁴ However, killings *by* police have been on the rise since 2000.⁵⁵ The increase in police killings of citizens, the spread of citizen and police videos of these killings, and the publicity these videos receive in the media are flashpoints of anger and resentment, particularly in minority communities. The emergence of active advocacy groups and widespread protests have increased attention to police killings and widened the breach between citizens and police in minority communities.⁵⁶

It is hard to reconcile the downward trend in killings of police—and of homicides nationally⁵⁷ and in most cities⁵⁸—with the rise in killings by police. This disconnect is not lost on advocacy groups such as Black Lives Matter, and it heightens distrust of police. For their part, police responses to these trends seem disproportionate, although ambush killings may play an outsized role in their fears.

57. See *infra* Figure 4.

58. See *infra* Figure 3.

The available data on police shootings of civilians show connections between police killings and race—trends that confirm what is common knowledge for many Black citizens and communities.⁵⁹ Professors Joscha Legewie and Jeffrey Fagan suggest that police killings reflect a broader context of racial conflict and racial threat in cities, and show that police killings of Blacks from 2014 to 2016 were a function more of racial disparities in population than racial metrics of crime or violence.⁶⁰ Other research, as well as Legewie and Fagan’s study, demonstrates that the absence of racial diversity among police contributes to racial gaps in police killings of Black citizens.⁶¹ Using data from 2005 to 2012 in sixteen states, a research team at the Harvard School of Public Health found stark racial and ethnic disparities of eight to one in police killings.⁶² Another study compared police killings of citizens to police contacts through street stops, traffic stops, and arrests and showed that racial disparities in police killings in 2012 were explained by large racial differences in exposure to police and rates of police contact.⁶³

Research by Professor Roland Fryer examining police use of force in Houston, one of the nation’s largest cities, shows a nearly 50% greater incidence of use of force by police in encounters with Black or Latino

59. See, e.g., Gregory B. Hladky, *Lawmakers: Cases of Police Bias, Abuse Create Deep Distrust*, Hartford Courant (Apr. 2, 2015, 6:45 PM), <http://www.courant.com/politics/hc-police-minority-community-distrust-20150402-story.html> (on file with the *Columbia Law Review*) (reporting lawmakers’ descriptions of “the distrust and fear of police within Connecticut’s black and Hispanic communities and their doubts about the pace of reform”); see also President’s Task Force on 21st Century Policing, *Final Report of the President’s Task Force on 21st Century Policing 9–11* (2015), http://cops.usdoj.gov/pdf/taskforce/TaskForce_FinalReport.pdf [<http://perma.cc/L5WG-MT4A>] (discussing the discrepancy between White and non-White communities’ trust of the police).

60. Legewie & Fagan, *supra* note 50, at 34 (describing how the study’s data “reveal a race-specific pattern in the ways in which the police respond to crime”).

61. *Id.* at 34–35 (finding “evidence that a high proportion of black officers might not necessarily reduce the number of officer-involved killings directly, but mitigates the role of group threat and thereby eases tensions between the police and African-American communities”); see also Sean Nicholson-Crotty, Jill Nicholson-Crotty & Sergio Fernandez, *Will More Black Cops Matter? Officer Race and Police-Involved Homicides of Black Citizens*, 77 *Pub. Admin. Rev.* (forthcoming 2017) (manuscript at 22) (on file with the *Columbia Law Review*) (finding that increasing the percentage of Black officers will likely not decrease violence unless the police department has reached a “critical mass” of Black officers).

62. Catherine Barber et al., *Homicides by Police: Comparing Counts from the National Violent Death Reporting System, Vital Statistics, and Supplementary Homicide Reports*, 106 *Am. J. Pub. Health* 922, 924 (2016) (citing the rate of “legal intervention homicides” as 0.48 per 100,000 population for Blacks compared to 0.06 for Asians).

63. Ted R. Miller et al., *Perils of Police Action: A Cautionary Tale from Police Data Sets*, 23 *Inj. Prevention* 27, 29 (2017) [hereinafter Miller et al., *Perils of Police Action*] (finding the ratio of people law enforcement killed or medically treated for injury by law enforcement is “surprisingly consistent by race/ethnicity” and “[b]lacks have high arrest and stop rates, and per capita are much more likely than whites to die at the hands of police” (citations omitted)).

persons but no disparity by race in shootings by police.⁶⁴ Justin Feldman's subsequent analyses of Professor Fryer's Houston results showed that, in fact, Blacks were nearly five times more likely to be shot relative to Whites and Latinos were nearly twice as likely to be shot relative to Whites.⁶⁵ Professor Fryer searched for evidence of *racial bias* in police shootings in Houston, using statistical models to identify intentional bias. He found none. Feldman's analyses of the same data examined *statistical discrimination*⁶⁶—or disparate treatment of Black and Latino suspects by police in their use of force—and showed large racial disparities.⁶⁷ Overall, the evidence of racially disparate police enforcement across cities reinforces longstanding beliefs among Black citizens about disparate treatment at the hands of the police and helps spread a narrative of an uneven burden that Black citizens bear in police–citizen encounters.⁶⁸

64. Roland G. Fryer, Jr., *An Empirical Analysis of Racial Differences in Police Use of Force 3–7* (Nat'l Bureau of Econ. Research, Working Paper No. 22399, 2016), www.nber.org/papers/w22399.pdf (on file with the *Columbia Law Review*).

65. Justin Feldman, *Roland Fryer Is Wrong: There Is Racial Bias in Shootings by Police*, Scholars at Harv.: Justin Feldman Blog (July 12, 2016), <http://scholar.harvard.edu/jfeldman/blog/roland-fryer-wrong-there-racial-bias-shootings-police> [<http://perma.cc/BP5V-NJ37>].

66. Statistical discrimination reflects differences in the rates of an event by race, after controlling for race-specific and plausible nonrace factors that might explain such differences. Racial bias looks for evidence of intent to discriminate, independent of evidence of racial disparities. See *id.* (explaining the difference between statistical discrimination and racial bias in the context of discriminatory policing).

67. *Id.* (finding “black people were over 5 times as likely to be shot relative to whites [and] [l]atinos were roughly twice as likely to be shot versus whites”).

Brunson, “Police Don’t Like Black People”: African-American Young Men’s Accumulated Police Experiences, 6 *Criminology & Pub. Pol’y* 71, 95 (2007) (“The combination of frequent involuntary police contact, coupled with what study participants considered poor treatment during such encounters, contributed to an accumulated body of unfavorable experiences that collectively shaped young men’s views of police.”); Rod K. Brunson & Ronald Weitzer, *Police Relations with Black and White Youths in Different Urban Neighborhoods*, 44 *Urb. Aff. Rev.* 858, 864–65 (2009) (observing “racial and neighborhood differences” between Black and White neighborhoods such that White youth “had a less troubled relationship with and more positive views of the police than Black youth” and “police treatment of residents appeared to be less problematic in the White neighborhood”); Tom R. Tyler, *Policing in Black and White: Ethnic Group Differences in Trust and Confidence in the Police*, 8 *Police Q.* 322, 323–24 (2005) (examining racial discrepancies in community trust in the police); Patricia Y. Warren, *The Continuing Significance of Race: An Analysis Across Two Levels of Policing*, 91 *Soc. Sci. Q.* 1025, 1026 (2010) (“Perceptions of racial profiling are used to illustrate the link between more widespread racialized stories about police behavior and individual attitudes toward police.”); Melissa Healy, *Blacks Are More Likely to Be Killed by Police, but That’s Because They’re More Likely to Be Stopped*, Study Says, *L.A. Times* (July 25, 2016, 3:00 PM), <http://www.latimes.com/science/sciencenow/la-sci-sn-cops-race-injury-20160725-snap-story.html> (on file with the *Columbia Law Review*) (examining the Miller et al. study, see Miller et al., *Perils of Police Action*, *supra* note 63).

B. *A Vortex of Forces*

The swirling factors addressed above—spiking homicide rates in some cities, police distrust of citizens generally, the protests of Black citizens in particular, police resistance to court oversight to remedy constitutional violations, an expressed reluctance by police to engage with crime suspects, police shootings and killings of Black citizens, distrust of police, and withdrawal from police–citizen cooperation in communities hardest hit by violence—describe a vortex of forces that can potentially form a political crisis. The depth of the gap in trust between citizens and police is alarming and seemingly intractable.

Even as shootings by police have led to widespread anger and political activism among minority citizens, shootings *of* police have stirred up deep anger and feelings of alienation among police. Officers are skeptical of the motivations and goals of the citizen protests: Far more officers attribute the protests to anti-police bias than to sincere concerns about police accountability.⁶⁹ Most police see no systemic factors in their profession that lead to police killings.⁷⁰ This clashes with data from general population surveys in which the majority of respondents view police shootings and killings of citizens as symptomatic of deeper problems in that profession.⁷¹ And there are differences by race in these perceptions not only among the general public but also within police departments between Black and White officers. These different perceptions are not only on policing matters but also on the contexts of racial inequality broadly in American life.⁷² That police would pull back from their duties⁷³ in the face of criticism and serious public safety concerns in several cities highlights the deep cynicism and despair animating this crisis.⁷⁴

69. Morin et al., *supra* note 23, at 5 (“Two-thirds of officers (68%) say the demonstrations are motivated to a great extent by anti-police bias; only 10% in a separate question say protesters are similarly motivated by a genuine desire to hold police accountable for their actions.”).

70. *Id.* (“Some two-thirds [of police officers surveyed] characterize the fatal encounters that prompted the demonstrations as isolated incidents and not signs of broader problems between police and the black community—a view that stands in sharp contrast with the assessment of the general public.”).

71. *Id.* (“In a separate Pew Research Center survey of U.S. adults, 60% say these incidents are symptoms of a deeper problem.”).

72. See *id.* at 6–7 (“[V]irtually all white officers (92%) but only 29% of their black colleagues say that the country has made the changes needed to assure equal rights for blacks.”).

73. This process is often referred to as “de-policing.”

74. One commentator, Radley Balko, views police self-reporting of a pullback to be a petulant response that “insults the profession generally as well as those officers who continue to perform their jobs at high levels of professionalism [Balko] imagine[s] that doctors, soldiers, lawyers and members of just about every other profession would feel the same way.” Radley Balko, *Why Are Police Groups and Their Advocates Advancing a Theory that Makes Police Officers Look Terrible?*, *Wash. Post* (Jan. 23, 2017),

These intersecting conflicts are the subject of this Mini-Symposium. Our purpose is to identify social, historical, and institutional contexts to understand the current set of crises. In this Essay, we create a historical context of episodic periods of violence epidemics over the past fifty years and provide perspective on previous eras to inform thinking about the present. We also discuss the dynamics of the cynicism and distrust that have created the current crisis of legitimacy between citizens and police and describe the connections between the separate sources of tension. We avoid proscriptions but urge exploration of the dynamics underlying these tensions as a first step to remediate distrust and build cooperation as a pathway to public safety.

Two additional essays contribute to the Mini-Symposium. Professor John Donohue explores the causal influences on crime in 2015 and points to declining prison populations, declining police numbers, and growing markets for illegal drugs as promising candidates.⁷⁵ He goes on to suggest that de-policing, to the extent that it is occurring, does not explain the rising homicide rates in cities nationwide. Professor Tracey Meares suggests that even as we try to understand troubling increases in violent crime in a number of cities, we need to promote the building of trust between the police and the communities they serve.⁷⁶ We are also grateful for the encouragement of FBI Director James Comey, who has helped put many of the issues discussed here in the national spotlight and has pushed for the analysis that, we hope, this symposium contributes to.⁷⁷

<http://wpo.st/It1X2> [<http://perma.cc/ST2A-6RK7>]. Despite police officers' rational fear of ambush, their views do not reflect the actual risk of job-related injuries—police are not represented amongst the industry sectors at the highest risk for fatal workplace injuries. Cf. U.S. Bureau of Labor Statistics, Current Population Survey, Census of Fatal Occupational Injuries, Fatal Work Injuries by Adjusted Industry 14 (2015), <http://www.bls.gov/iif/oshwc/foi/cfch0014.pdf> [<http://perma.cc/5YNM-N89P>] (“Private construction had the highest count of fatal injuries in 2015, but the private agriculture, forestry, fishing and hunting sector had the highest fatal work injury rate.”). But we also could consider their actions to be a model of a rational, not petulant, actor: the possibility that employees—such as police officers—with an underspecified job description and a high degree of discretion might well prefer inaction for which they are unlikely to be blamed as opposed to action for which they might be held responsible.

75. 2015 saw a large jump in the murder rate, even as that jump was from historically low levels and as property crime remained quite low. See John J. Donohue, Comey, Trump, and the Puzzling Pattern of Crime in 2015 and Beyond, 117 *Colum. L. Rev.* 1297, 1321 fig.8 (2017).

77. James B. Comey, Introduction, 117 *Colum. L. Rev.* 1233 (2017) [hereinafter Comey, Introduction].

II. UNDERSTANDING THE TRENDS

The recent increases in crime and violence create several challenges for police executives, community leaders, and governance. Crime is complicated and quite local in its impacts; it is city-specific and concentrated in particular neighborhoods within cities.⁷⁸ While one city may be shaken by a homicide spike, its overall number and rate of homicides may be quite small compared to those of others. Explanations to date have sought to link the recent rise in homicides to a “Ferguson Effect”: Police retreat from “proactive policing” in the wake of heightened scrutiny of incidents of excessive force and lethal police violence by local residents and the press.⁷⁹ However, this provocative claim of a strong causal effect lacks systematic evidence and a careful counterfactual analysis.⁸⁰ At the same time, other descriptions have blurred our understanding of the rise in homicides by placing homicide in a heterogeneous category of violent crime, which may mask the sharp edges of the homicide spikes in some cities and the issues that the spikes raise concerning neighborhoods and policing and local governing.⁸¹

78. Ruth D. Peterson & Lauren J. Krivo, *Divergent Social Worlds: Neighborhood Crime and the Racial-Spatial Divide* 7–8 (2010) (describing the importance of neighborhood and area-specific crime studies, as opposed to general city-wide crime studies).

79. James B. Comey, Dir., FBI, Remarks Delivered at the University of Chicago Law School: Law Enforcement and the Communities We Serve: Bending the Lines Toward Safety and Justice (Oct. 23, 2015), <http://www.fbi.gov/news/speeches/law-enforcement-and-the-communities-we-serve-bending-the-lines-toward-safety-and-justice> [<http://perma.cc/KYL2-JW8Z>] [hereinafter Comey, Remarks at University of Chicago]; Heather Mac Donald, *The Ferguson Effect*, Wash. Post: Volokh Conspiracy (July 20, 2016), <http://wpo.st/JkPX2> [<http://perma.cc/FG7B-UNJB>]; see also Richard Rosenfeld, Nat'l Inst. of Justice, *Documenting and Explaining the 2015 Homicide Rise: Research Directions 18–23* (2016), <http://www.ncjrs.gov/pdffiles1/nij/249895.pdf> [<http://perma.cc/VE6P-74D9>] (acknowledging several different potential definitions of the “Ferguson Effect” and exploring each in depth).

80. Neil Gross, *Is There a ‘Ferguson Effect’?*, N.Y. Times (Sept. 30, 2016), <http://nyti.ms/2jKMOAh> (on file with the *Columbia Law Review*) (discussing the “Ferguson Effect” and its origins and highlighting the emerging scholarly empirical literature); Eric Lichtblau, *FBI Director Says ‘Viral Video Effect’ Blunts Police Work*, N.Y. Times (May 11, 2016), <http://nyti.ms/2jKKnO9> (on file with the *Columbia Law Review*); Ames Grawert & James Cullen, *What the Data Tell Us About Crime and the ‘Ferguson Effect,’* Brennan Ctr. for Justice Blog (Mar. 7, 2016), <http://www.brennancenter.org/blog/what-data-tell-us-about-crime-and-%E2%80%98ferguson-effect%E2%80%99> [<http://perma.cc/94CW-6XJE>] (describing and defining the “Ferguson Effect” but drawing attention to a study that did not find the Effect to be causing an increase in crime). For an alternate explanation, see Matthew Desmond & Andrew V. Papachristos, *Why Don't You Just Call the Cops?*, N.Y. Times (Sept. 30, 2016), <http://nyti.ms/2jKCGY2> (on file with the *Columbia Law Review*) (proposing increases in crime result from members of the public being less likely to call the police for help in the wake of highly publicized incidents of police brutality rather than police officers being less active as a result of public scrutiny as proponents of the “Ferguson Effect” suggest).

81. Matthew Friedman, Ames C. Grawert & James Cullen, Brennan Ctr. for Justice, *Crime in 2016: A Preliminary Analysis 11* (2016), <http://www.brennancenter.org/sites/>

Because the evidence is scant on these causal claims, we need a richer and more disciplined understanding to know exactly what is occurring.

Developing this richer understanding requires a more granular perspective of crime changes in communities. The first step is to measure and describe recent trends in ways that are helpful to each stakeholder group and to provide a basis of evidence from which cities can shape their responses.

The second step is to give tempered and realistic perspectives on the details of the changes in crime and violence, a task that Professor Donohue has begun.⁸² What is not known—and it is an essential question—is whether the increases of the past two years signal the beginning of a longer-term trend in violent crime or whether the current increase in a few cities is a temporary disruption in the longer-term trends. If there is a longer-term trend in the works, it is essential to identify which cities are in the midst of it and which might realize an increase at some point in the future. These questions apply as much across neighborhoods within cities as they do across cities.

The third step is to understand the contexts and circumstances within cities that explain why city-specific homicide and other violent crime rates have remained stable or increased. These are processes and social structures that are at work at the city level or across larger entities such as counties and regions. Police officials, local political actors, and neighborhood organizations and city planners recognize that homicides tend to cluster in a small number of neighborhoods and that those troubled places are likely to remain among the most troubled areas in their cities over time. Researchers have called these places “poverty traps”⁸³ and use this concept to explain not only why there are outbreaks of violence in specific places but also why these are places where the dynamics of delegitimation and de-policing take place in tandem and why citizen withdrawal has taken place contemporaneously with police withdrawal.⁸⁴

default/files/publications/Crime_2016_Preliminary_Analysis.pdf [http://perma.cc/PM7Q-98WQ] (comparing change in crime rates and murder rates and noting trends that “indicate[] there may be a problem with murder in . . . specific cities, not that there is a national trend of rising crime”).

82. See Donohue, *supra* note 75.

83. Samuel Bowles, Steven N. Durlauf & Karla Hoff, *Poverty Traps 2* (2011); Robert J. Sampson & Jeffery D. Morenoff, *Durable Inequality: Spatial Dynamics, Social Processes, and the Persistence of Poverty in Chicago Neighborhoods*, in *Poverty Traps*, *supra*, at 176, 201 (2011) (demonstrating “communities displaying elevated levels of legal cynicism and lower levels of collective efficacy were those that had been exposed to poverty in 1970 and increases in poverty from 1970 to 1990”).

84. See, e.g., David S. Kirk & Andrew V. Papachristos, *Cultural Mechanisms and the Persistence of Neighborhood Violence*, 116 *Am. J. Soc.* 1190, 1228 (2011) (finding “cultural frames have a constraining influence” and “cynicism constrains choice if individuals presume that the law is unavailable or unresponsive to their needs, thus pushing individuals to engage in their own brand of social control” such as violence).

A. *The Past Two Years*

Across the nation's thirty largest cities, crime is as likely to have increased in the past two years as it is to have remained stable or declined. Table 1 shows the changes in overall crime and violent crime for these cities in descending order of population for the two-year period ending in late December 2016. Averaging across the thirty cities, the rate of violent crime increased by more than four times the rate of increase for overall crime. Eight cities reported declines in violent crime rates, and twelve cities reported declines in overall crime rates. Nine of the thirty cities did not provide data.

TABLE 1: CRIME IN THE THIRTY LARGEST U.S. CITIES, 2015 TO 2016⁸⁵

| | 2015 | 2016 | | 2015 | 2016 | |
|------------------|------------------------------|---------------------------|---------------------------|--------------------------------------|--------------------------------------|--------------------------------------|
| | Crime Rate per 100,000 | Crime Rate per 100,000 | % Change in Crime Rate | Violent Crime Rate per 100,000 | Violent Crime Rate per 100,000 | % Change in Violent Crime Rate |
| New York City | 1,245.6 | 1,266.3 | 1.70% | 470.2 | 469.7 | -0.10% |
| Los Angeles | 2,900.9 | 3,052.3 | 5.20% | 575.4 | 652.1 | 13.30% |
| Chicago | 3,947.6 | 4,305.7 | 9.10% | 996 | 1,157.60 | 16.20% |
| Houston | 5,332.2 | 5,337.9 | 0.10% | 924.8 | 1,008.50 | 9.10% |
| Philadelphia | 3,878.2 | 3,629.2 | -6.40% | 938.5 | 884.4 | -5.80% |
| Phoenix | NA | NA | NA | NA | NA | NA |
| San Antonio | 5,521.4 | 6,805.5 | 23.30% | 513.3 | 783.1 | 52.50% |
| San Diego | 2,446.0 | 2,137.8 | -12.60% | 359 | 283.5 | -21.00% |
| Dallas | 4,765.7 | 4,563.6 | -4.20% | 742.4 | 817.9 | 10.20% |
| San Jose | 2,678.8 | 2,460.5 | -8.10% | 288.8 | 316.7 | 9.70% |
| Austin | 4,028.2 | 3,712.7 | -7.80% | 319.4 | 351.2 | 10.00% |
| Jacksonville | NA | NA | NA | NA | NA | NA |
| San Francisco | 8,856.9 | 7,719.0 | -12.80% | 2,056.20 | 1,942.10 | -5.50% |
| Indianapolis | NA | NA | NA | NA | NA | NA |

| Oklahoma City | 4,371.0 | 4,891.6 | 11.90% | 687.4 | 734.5 | 6.90% |
| Las Vegas | NA | NA | NA | NA | NA | NA |
| Baltimore | 6,446.3 | 6,049.7 | -6.20% | 1,576.90 | 1,668.10 | 5.80% |
| Louisville | 6,160.4 | 6,403.6 | 3.90% | 2,233.00 | 2,407.10 | 7.80% |
| Average | - | - | 1.30% | - | - | 5.50% |

85. The data for this table was compiled by the Brennan Center for Justice using crime data obtained directly from police departments in these cities. See Friedman et al., *supra* note 81, at 4 tbl.1, 15 (providing data and explaining the methodology).

The largest increase in violent crime was in San Antonio (52.5%), followed by Charlotte (22.5%).⁸⁶ The largest decrease in violent crime was in San Diego (-21.0%), followed by Detroit (-7.0%). The largest increases in overall crime rates were in San Antonio (23.3%) and Charlotte (17.5%).⁸⁷ The largest decreases in overall crime rates were observed in San Francisco (-12.8%) and San Diego (-12.6%).

TABLE 2: MURDER IN THE THIRTY LARGEST U.S. CITIES, 2015 TO 2016⁸⁸

| | 2015 Total Murders | 2016 Total Murders | % Change in Murders | 2015 Murder Rate per 100,000 | 2016 Murder Rate per 100,000 | % Change in Murder Rate |
|------------------|--------------------|--------------------|---------------------|------------------------------|------------------------------|-------------------------|
| New York City | 352 | 359 | 2.10% | 4.1 | 4.2 | 1.20% |

| Louisville | 87 | 111 | 27.30% | 12.9 | 16.4 | 26.80% |
| Average | - | - | 14.40% | - | - | 13.10% |

86. Charlotte data may be skewed by two nights of protests and demonstrations with property destruction following the September 20, 2016, police shooting of Keith Lamont Scott. See Richard Fausset & Alan Blinder, *Man Is Shot in Charlotte as Unrest Stretches to Second Night*, N.Y. Times (Sept. 21, 2016), <http://nyti.ms/2jPJR3C> (on file with the *Columbia Law Review*).

87. But see supra note 86 (noting potentially skewed data based on protests).

88. *Id.* at 6 tbl.2.

As salient as violent crime is, it is a heterogeneous category that includes murder, robbery, assaults, and a small set of other crimes.⁸⁹ Much of the attention to crime spikes in the past two years has focused on shootings and murders. Murder is the most politically important crime, attracting greater media and political attention than other crimes. Table 2 shows the changes in murders and murder rates for 2015 to 2016 for the thirty largest U.S. cities. The murder rate decreased in the past year in four cities, and the number of murders decreased in five cities.⁹⁰ The rest of the twenty-two cities providing data showed increases in these areas in each of the one-year periods. The overall murder count rose by 14.4%, while the murder rate rose by 13.1%. The largest increase for both time periods was in Austin, where the change in the murder count was 115.4% and the change in the murder rate was 106.3%. The largest decrease for both time periods was in Washington, D.C., where the change in the murder count was -10.9% and the change in the murder rate was -12.7%.

Together, Tables 1 and 2 show only a weak linkage between recent trends in increasing (or decreasing) overall crime rates, including violent crime rates, and increases in murder rates. A few cities showed substantial increases in both overall crime and murder: San Antonio, Chicago, and Oklahoma City. Many other cities had large increases in their murder rates but not their overall crime rates: San Jose, San Diego, Nashville, and Boston, among others. Even limiting the comparison to violent crime and murder, the trends seem to suggest a distinct pattern for murder. Murder, then, is different. Its greater salience as a crime is one reason why there has been a sharp focus on murder and considerable attention to whether the current rise in homicides portends the end of an era of decline and the onset of a period of instability in murder.

But conclusions based on short-term trends can mask long-term trends with richer explanatory powers. Figures 2 and 3 show longer-term trends for murder in several cities. Figure 2 shows trends for three large cities. The data start in 1985, one year before a nationwide increase in homicides concurrent with the epidemic of crack cocaine in American cities,⁹¹ and continue to 2016, more than twenty years into a nationwide

89. FBI, 2016 January–June Preliminary Semi-Annual Uniform Crime Report, FBI: Unif. Crime Reporting, <http://ucr.fbi.gov/crime-in-the-u.s/2016/preliminary-semiannual-uniform-crime-report-januaryjune-2016/tables/table-1> [<http://perma.cc/F2GU-WTPD>] (last visited Feb. 3, 2017) (defining violent crimes as “murder, rape . . . robbery, and aggravated assault”).

90. Eight cities did not report data for this analysis.

91. Alfred Blumstein, *Youth Violence, Guns, and the Illicit-Drug Industry*, 86 *J. Crim. L. & Criminology* 10, 11 (1995) (“Both the murder and the robbery rates peaked in about 1980, declined through the early 1980s, and then climbed again during the late 1980s with the intensification of the crack epidemic and the ‘war on drugs.’”); Jeff Grogger & Michael Willis, *The Emergence of Crack Cocaine and the Rise in Urban Crime Rates*, 82 *Rev. Econ. & Stat.* 519, 528 (2000) (“Using two different sources of information to date the

decline in murders—a decline felt in both large and small cities, as well as in suburban and rural areas.⁹² Murders in these three cities declined steadily from their similar 1990–1995 peak rates through 2014. Chicago’s murder rate stabilized at a higher rate than the rates in New York City and Los Angeles (L.A.). In L.A., a sharp decline from 1993 to 1999 was followed by an increase through 2002, when the decline resumed. After nearly a decade of the second decline, the murder rate in L.A. rose slightly from 2014 to 2016. In New York City, the murder rate continued its durable secular decline through 2014. After a very small one-year increase in 2015, the decline in New York City resumed in 2016.

emergence of crack in 27 metropolitan areas across the U.S., our analysis shows that the arrival of crack cocaine led crime to rise substantially in the late 1980s and early 1990s.”).

92. See Alfred Blumstein & Richard Rosenfeld, *Explaining Recent Trends in U.S. Homicide Rates*, 88 *J. Crim. L. & Criminology* 1175, 1175 (1998) (“[The homicide rate] climbed a full 24% to a peak of 9.8 in 1991, and has been declining markedly since then”); Alfred Blumstein, Frederick P. Rivara & Richard Rosenfeld, *The Rise and Decline of Homicide—and Why*, 21 *Ann. Rev. Pub. Health* 505, 506–07 & fig.1 (2000) (“The reasons for the rise in homicide in the latter half of the 1980s, peaking in the early 1990s, and the subsequent equally dramatic decline span both criminology and public health.”); Jacqueline Cohen et al., *The Role of Drug Markets and Gangs in Local Homicide Rates*, 2 *Homicide Stud.* 241, 241–42 (1998) (discussing recent shifts in homicide rates); Steven D. Levitt, *Understanding Why Crime Fell in the 1990s: Four Factors that Explain the Decline and Six that Do Not*, 18 *J. Econ. Persp.* 163, 163 (2004) (“Homicide rates plunged 43 percent from the peak in 1991 to 2001, reaching the lowest levels in 35 years.”); see also Franklin E. Zimring, *The Great American Crime Decline* 3 (2007) (“The data show a very substantial and nationwide drop, across all categories of serious crime, steadily progressing through the decade.”); Michael Tonry, *Why Crime Rates Are Falling Throughout the Western World*, 43 *Crime & Just.* 1, 1–2 (2014) (recognizing and exploring causes for parallel dropping crime rates among English-speaking countries and western Europe).

FIGURE 2: MURDERS PER 100,000 PERSONS IN THE THREE LARGEST U.S. CITIES, 1985 TO 2016⁹³

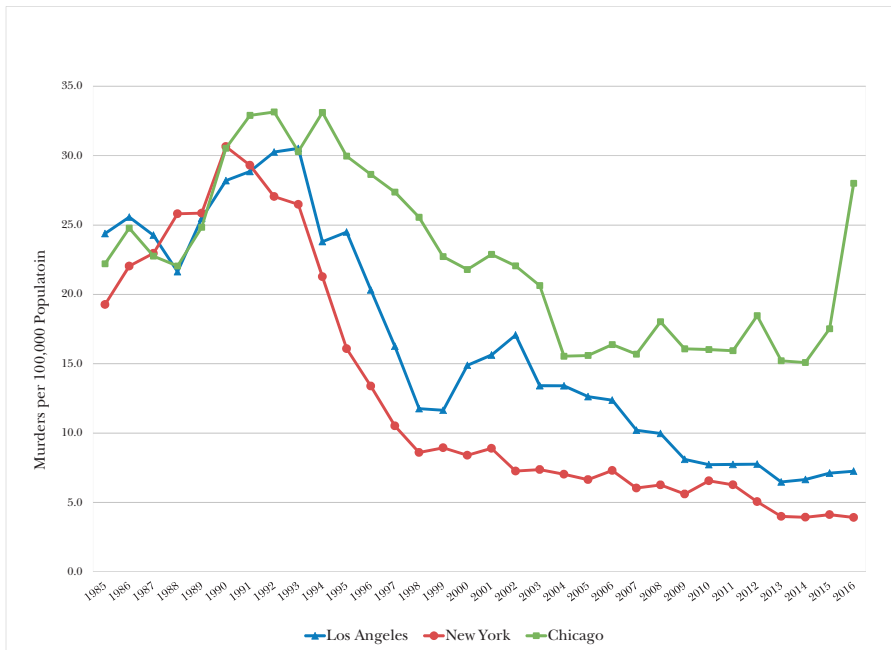

Figure 2 has two important lessons. The first is that not all crime or murder declines are alike. Even in the midst of a robust long-term period of decline, there are temporary increases. Across these three large cities, the timing, duration, and magnitude of the spikes within the longer-term trends vary. These secular declines in fact contain short-term anomalies that may have city-specific explanations.

The second lesson is that cities may have similarities in slopes or rates of decline for long periods but also have level differences over time. Chicago's decline was more short-lived, but its period of relative stability—with short-term increases and declines—lasted nearly a decade, from 2004 to 2014, before the current spike began. What also stands out from Figure 2 is the magnitude of the two-year spike in Chicago beginning in 2015. This extraordinary spike in Chicago's murder rate, does have analogs in other cities, as we see in Figure 3.

93. The data used to produce this figure are from the FBI's Uniform Crime Reporting (UCR) program. The FBI's UCR data from 1975 to 2015 were compiled in one location by the Marshall Project. See Gabriel Dance, Tom Meagher & Emily Hopkins, *The Marshall Project, Data for Examining Uniform Crime Reporting Data for 68 Major Cities*, GitHub, <http://github.com/themarshallproject/city-crime> [<http://perma.cc/V79G-JP3Q>] [hereinafter Dance et al., UCR Data for 68 Cities] (last visited Mar. 27, 2017).

FIGURE 3: MURDERS PER 100,000 POPULATION IN TEN U.S. CITIES, 1985 TO 2016⁹⁴

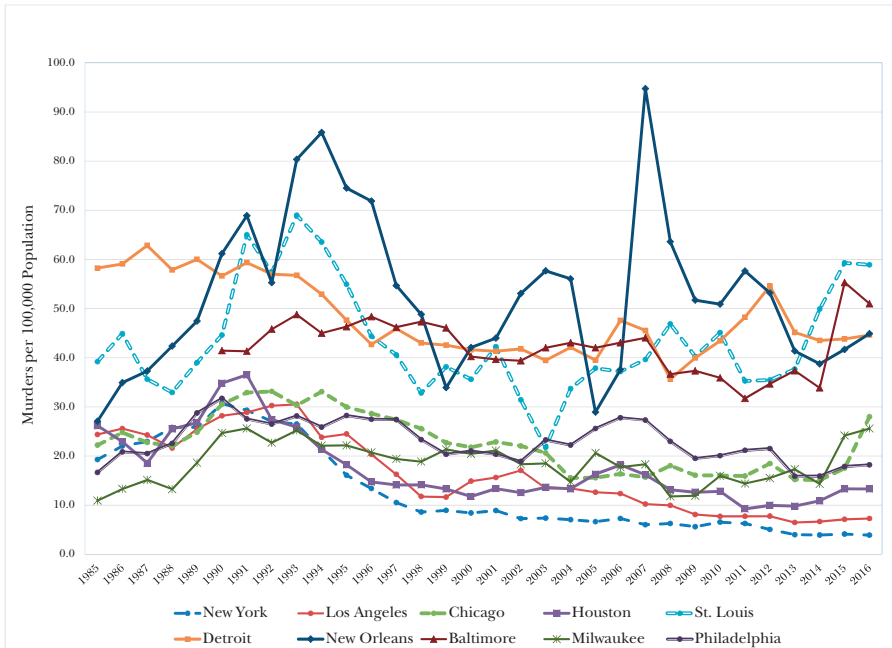

Figure 3 expands the analysis in Figure 2 to include seven additional cities. The city-specific trends reveal that most cities follow a similar pattern of increases and declines over time.⁹⁵ Several patterns emerge across these city-specific trends. First, Chicago is not alone in a steep increase in homicide rates starting in 2015. Murder rates also increased sharply in St. Louis, Baltimore, Milwaukee, and New Orleans. Indeed, it is worth noting that many of the cities with the highest murder rate in 2016—including St. Louis, 59.3, and New Orleans, 44.5—are not among the thirty largest cities.⁹⁶ Thus, while Chicago's size makes it account for a

94. Id.

95. Gabriel Dance & Tom Meagher, *Crime in Context: Violent Crime Is Up in Some Places, but Is It Really a Trend?*, Marshall Project (Aug. 18, 2016), <http://www.themarshallproject.org/2016/08/18/crime-in-context#.6HgY9cx0> [<http://perma.cc/C66P-A527>] (finding sixty-eight cities could fit into four patterns of crime); see also Dance et al., *UCR Data for 68 Cities*, supra note 93 (providing the table of data used to analyze crime in sixty-eight cities over the forty-year period presented in Dance & Meagher, supra).

96. See Jeff Asher, *U.S. Cities Experienced Another Big Rise in Murder in 2016, FiveThirtyEight* (Jan. 9, 2017, 2:32 PM), http://fivethirtyeight.com/features/u-s-cities-experienced-another-big-rise-in-murder-in-2016/?ex_cid=story-twitter [<http://perma.cc/L5QW-LLKB>]. The below chart uses murder rate data from this article.

disproportionate share of the total increase in homicides during this time, its per capita increase is in line with these other cities that suffered increases as well.

Second, the trends of several cities show continued stability in their murder rates, and any increases in murder rates since 2012 were modest. These cities include Houston, New York City, L.A., and Philadelphia. These four cities also had long-term declines in murder rates dating to the early 1990s. Thus, the long-term trend is one of stability for these places after a lengthy period of decline. Baltimore and St. Louis also had sharp declines in their murder rates followed by short-term sharp spikes of one to two years.

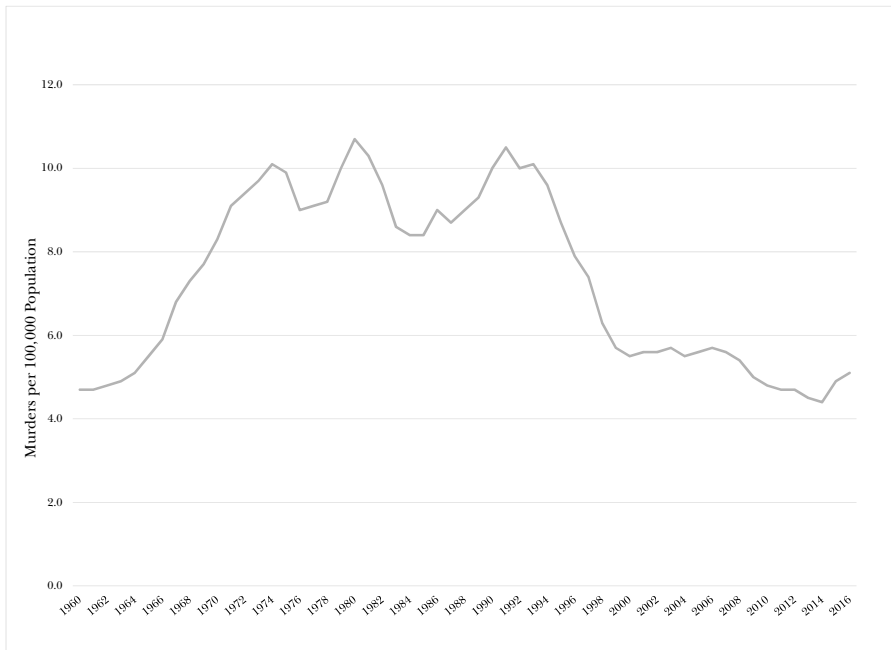

A third lesson in Figure 3 is from the clustering of six cities with similar homicide rates and similar long-term trends. Despite the increases in murder rates in Chicago and Milwaukee, the longer-term trends for this group suggest periods of decline marked by periods of short-term increases. The other four cities have overall higher murder rates over the past twenty-two years and more volatility in those murder rates. New Orleans in particular has very large increases and declines over time, even if we discount the sharp spike in the two years immediately after Hurricane Katrina.⁹⁷

| U.S. Cities with the Highest 2016 Murder Rates | |
|--|-----------------------------|
| City | 2016 Murder Rate (per 100K) |
| St. Louis | 59.3 |
| Baltimore | 51.2 |
| Detroit | 44.9 |
| New Orleans | 44.5 |
| Cleveland | 35.0 |
| Newark, N.J. | 33.0 |
| Memphis, Tenn. | 31.9 |
| Chicago | 27.9 |
| Kansas City, Mo. | 26.4 |
| Atlanta | 23.9 |

97. Michael Leitner et al., *The Impact of Hurricane Katrina on Reported Crimes in Louisiana: A Spatial and Temporal Analysis*, 63 *Prof. Geographer* 244, 258 (2011) (finding “murder and aggravated assault rates even exceeding prestorm averages by the end of December 2007” in New Orleans); Mark VanLandingham, *Letters, 2007 Murder Rates in New Orleans, Louisiana*, 98 *Am. J. Pub. Health* 776, 776 (2008) (“The murder rate for New Orleans remains stubbornly elevated at extraordinarily high levels since Hurricane Katrina and has yet to begin a decline to even prestorm levels, which were very high in the first place.”); Mark VanLandingham, *Murder Rates in New Orleans, La, 2004–2006*, 97 *Am. J. Pub. Health* 1614, 1615 (2007) (“Compared with rates in cities of comparable size, murder rates in New Orleans have been substantially higher since at least 2004, and the disparity has been worsening since then.”); Sean P. Varano et al., *A Tale of Three Cities: Crime and Displacement After Hurricane Katrina*, 38 *J. Crim. Just.* 42, 48 (2010) (noting “[i]t seems safe, however, to conclude that the Katrina-related diaspora did not correspond with a wide-scale dramatic increase in crime”).

One important way to distinguish and assign meaning to the short-term spikes in Chicago and Milwaukee compared to the spikes in St. Louis and Baltimore is to develop an understanding of longer-term stability in murder rates and how city-specific factors contribute to that stability. Given these differences in the longer-term trends, it would not be unreasonable to predict that city-specific factors contribute to the longer-term stability in murder rates. Also, given the longer-term trends of increase followed by decline over a longer time window, it would not be unreasonable to predict that the current spikes will be of shorter duration and that a mean reversion to the long-term trend could begin within a year or two. Indeed, there is no evidence to suggest that the current increases would depart from the longer-term trend over the past three decades. In the cities with more volatile murder rates over the past twenty years, such predictions would be far more uncertain and prone to error without a much deeper understanding of the city-specific factors: the neighborhood contexts where spikes are concentrated, changes in the socio-economic landscape that may have preceded or accompanied these spikes, changes in the predicate crimes (such as robberies) that often have parallel trends with murder, and factors specific to the social organization of crime and its opportunities.

FIGURE 4: MURDERS PER 100,000 POPULATION, UNITED STATES, 1960 TO 2016⁹⁸

Efforts to explain these short-term murder increases have been expansive but with little clear empirical or analytic basis. One explanation centers on an increasing tendency among young males to settle disputes with lethal violence—violence that is made easier by ready access to guns.⁹⁹ Another narrative centers on increasing tensions among highly localized gangs protecting small territories whose boundaries are easily transgressed, provoking attacks that are cast as territorial

98. The data used to produce this figure are from the FBI's UCR report. See FBI, Table 1: Crime in the United States by Volume and Rate per 100,000 Inhabitants, 1996–2015, FBI: Unif. Crime Reporting, <http://ucr.fbi.gov/crime-in-the-u.s/2015/crime-in-the-u.s.-2015/tables/table-1> [<http://perma.cc/2EZ2-FM5W>] (last visited Mar. 27, 2017). Data from 1960 to 2014 are available from the FBI's Uniform Crime Reporting Statistics Data Tool. See FBI, Estimated Murder Rate from 2009–2014, Unif. Crime Reporting Statistics, <http://www.ucrdatatool.gov/Search/Crime/State/TrendsInOneVar.cfm> (To create the table using this tool, choose “United States - Total” for option a, “murder rate” for option b, and enter the range from 1960 to 2014 for option c, then click “get table.”) (on file with the *Columbia Law Review*) (last visited Mar. 27, 2017). The rate for 2016 was estimated by the Brennan Center in Friedman et al., *supra* note 81, at 1 (noting that the murder rate was projected to rise by 13.1% from 2015–2016).

99. See Julie Bosman & Mitch Smith, As Chicago Murder Rate Spikes, Many Fear Violence Has Become Normalized, *N.Y. Times* (Dec. 28, 2016), <http://nyti.ms/2kqLFuY> (on file with the *Columbia Law Review*) (noting criminology professor Arthur Lirigio's assertion that “in addition to the proliferation of guns and deepening poverty, personal disputes among gang members have led to more shootings”).

defense.¹⁰⁰ Still other explanations suggest an inability of police to solve murders and arrest the killers, leaving them free to kill again.¹⁰¹

Murder rates across American cities are heterogeneous. Disputes over drug sales, domestic homicides, and felony murders are all part of the story. Some murders are of innocent bystanders who are fatally wounded by stray bullets that are intended for others. Nevertheless, there are some constants in the demography, epidemiology, and social contexts of murder. We turn to those next.

B. *The Past Half Century*

Over the past five decades, there have been three distinct homicide epidemics in the United States.¹⁰² The first started in the mid-1960s and lasted for nearly a decade before a short-term decline through the end of the 1970s. The second began in the late 1970s, had a relatively short duration, and was followed by a precipitous decline in the murder rate through 1985. The third coincided with the crack epidemic that started in the late 1980s and continued through the early 1990s.¹⁰³ Although the onset and peak of each epidemic varied by city in its duration and (with minor variations) its intensity, all major cities assumed the same contours of recurring and cascading homicide epidemics. Figure 4 shows the national trend. City-specific trends for the period 1975 to 2015 reveal that most cities followed a similar pattern over time.¹⁰⁴

There is no shortage of explanations for each of the three homicide epidemics in Figure 4. Explanations include increasing racial residential segregation,¹⁰⁵ increasing poverty and the effects of deindustrialization on U.S. cities,¹⁰⁶ the proliferation of guns and increased firearm

100. See *id.* (quoting Chicago Police Superintendent Eddie Johnson on the proliferation of shootings that were targeted attacks by gang members).

101. Catherine Lee, *The Value of Death: Multiple Regression and Event History Analyses of Homicide Clearance in Los Angeles County*, 33 *J. Crim. Just.* 527, 530–33 (2003) (showing that homicide clearance rates are lower in L.A. in murders of non-White victims and that clearances via arrests are faster for White-victim homicides, combining to leave the killers of non-White victims free to kill again).

102. See *supra* Figure 4.

103. Grogger & Willis, *supra* note 91, at 528 (finding “the effect of the emergence of crack was substantial” and “in the absence of crack cocaine, the crime rate in 1991 would have remained below its previous peak in the early 1980s”).

104. See *supra* note 95 and accompanying text.

105. Douglas S. Massey & Nancy A. Denton, *American Apartheid: Segregation and the Making of the Underclass* 8 (1993) (“Residential segregation is the institutional apparatus that supports other racially discriminatory processes and binds them together into a coherent and uniquely effective system of racial subordination.”).

106. Robert J. Sampson & William Julius Wilson, *Toward a Theory of Race, Crime, and Urban Inequality*, in *Crime and Inequality* 37, 53 (John Hagan & Ruth D. Peterson eds., 1995) (suggesting “roots of urban violence” were possibly the result of a cohort of youth that “spent its childhood in the context of a rapidly changing urban environment unlike that of any previous point in U.S. history” when “the concentration of urban poverty and

availability through both legal and illegal channels,¹⁰⁷ and the spread of street gangs in U.S. cities.¹⁰⁸ Each of these explanations has some empirical and theoretical traction for specific places and specific eras. But common factors that can be plausibly linked to the temporal and spatial patterns in these homicide epidemics can provide a perspective, if not an explanation, that unifies these three tightly linked epidemics.¹⁰⁹ This Essay proposes that the link is a series of recurring and cumulative epidemics within cities of illicit drug use and illegal distribution, and that these epidemic patterns are shared across cities.

Each of these three periods of increasing and then decreasing murder rates experienced concurrent epidemics of illicit drugs. The first period from the mid-1960s to the late-1970s, with its increasing and then decreasing murder rate, was concurrent with the onset and decline of a heroin epidemic. The heroin epidemic of the 1960s and 1970s hit most of the large and small cities in the United States.¹¹⁰ Heroin addiction was linked to violence through distinct mechanisms. The first was acquisitive

other social dislocations began increasing sharply"); see also Elijah Anderson, *Code of the Street: Decency, Violence, and the Moral Life of the Inner City* 108 (1999) (noting when jobs disappear "the underground economy of drugs and crime often emerges to pick up the slack"); Douglas S. Massey, *Categorically Unequal: The American Stratification System* 205–07 (2007) (linking extreme inequality and spatial concentration of poverty to the adaptation of cultural mechanisms that sustain violence).

Health* 16, 16 (Supp. 1974) ("Aggregate treatment program data seem to show that the peak period of new heroin use occurred everywhere . . . about 1968, but when local data are corrected for addicts' delay in entering treatment, this synchronous national 'epidemic' becomes a sequence of local peaks ranging from 1967 to the present."); Bruce D. Johnson et al., *Drug Abuse in the Inner City: Impact on Hard-Drug Users and the Community*, 13 *Crime & Just.* 9, 14–15 (1990) [hereinafter Johnson et al., *Drug Abuse in the Inner City*] (describing the rise of heroin use in inner cities from 1965 to 1973).

violence—users and addicts committed crimes to get access to funds to buy drugs.¹¹¹ Robberies of other drug users, drug sellers, or individuals unrelated to such transactions were the primary income-generating mechanisms. Robbery rates soared—the linkage between robbery and homicide was even analyzed by a presidential commission on crime in the late 1960s.¹¹² The second mechanism linking heroin to violence was competition and conflicts between drug sellers, and the third (though rare) was violence resulting from the psychoactive effects of drugs.¹¹³

The mid-twentieth century heroin epidemic subsided (though it never disappeared), but within a short time, a cocaine epidemic took hold—an epidemic concurrent with the second period of the increase and decrease of the murder rate.¹¹⁴ The marketing of cocaine in this era differed extensively from the heroin trade in the previous decade.¹¹⁵ Retail heroin sales were less frequent due to the long duration of a heroin high and a tightly controlled illicit market. In turn, the volume of sales was far lower, and sales were more often done furtively; open-air markets were atypical.¹¹⁶ Cocaine marketing, on the other hand, flourished in outdoor open-air bazaars. Cocaine's psychotropic effects were different: Cocaine was a stimulant, in contrast to heroin, so users could repurchase often and maintain their high over time while doing other activities.¹¹⁷ In turn, the markets that sold cocaine in the street

served a wider population.¹¹⁸ Cocaine highs were shorter lasting, and users were more likely to make several purchases of smaller quantities in a shorter period of time.

The emergence and visibility of drug markets in this era attracted police attention in the form of undercover buy-and-bust operations that resulted in a high volume of arrests.¹¹⁹ One perverse effect of street-level enforcement was the disruption of drug-selling organizations, creating market instability and encouraging conflict and violence as new sellers moved to occupy the vacuums created by drug enforcement.¹²⁰ This conflict resulted in what Professor Paul Goldstein has called “systemic violence” within the illicit drug trade.¹²¹

As Figure 4 shows, there was a drop in homicide and violence at the end of this epidemic period over a five-year interval ending in 1985, as these markets and the population of users stabilized. In any epidemic, there is a period of adoption and spread among susceptible persons, but at some point, anyone who is motivated to try a drug has tried and either continued its use or set it aside.¹²² As the supply of new users declined, so too did the epidemic, and in turn, drug markets declined in size and activity. While homicide levels remained higher than twenty years earlier, the decline over that five-year period was precipitous.

The final period of increase and decrease of the murder rate coincided with the spread of crack cocaine—smokable cocaine—across U.S. cities starting in the mid-1980s. Street drug markets revived, expanded, and became more active.¹²³ Crack was sold in smaller quantities, with vials of two-to-four rocks costing about \$20 to \$30, and since the high was short lived, users continued to make purchases over a

123. See Johnson et al., *Drug Abuse in the Inner City*, *supra* note 110, at 16–17.

sustained period of time.¹²⁴ Young men were attracted to the drug trade in large part because of the promise of incomes far above what they could earn in conventional work.¹²⁵ Crack cocaine was a very strong stimulant, and sexual stimulation was one of its effects. This led to the transformation of sex markets as crack was marketed together with sex, and women users often exchanged sex for drugs.¹²⁶ Competition among crack-distribution organizations—which also sold other drugs, including cocaine and heroin—was often fierce and violence was common.¹²⁷ Street gangs entered the crack trade, also selling cocaine and heroin, and their competition was another context in which violence often erupted.¹²⁸

Crack spread across cities, and its arrival in each city was tightly linked with a surge in violence, including homicides.¹²⁹ In many instances, drug sales occurred in open-air markets located in the poorest, highest-crime, and most heavily minority-population neighborhoods of the cities.¹³⁰ These also were the places where access to legal work, both socially and spatially, was severely limited, and the local formation of relatively lucrative drug markets incentivized drug selling for those shut out of legal work.¹³¹ For others, drug selling offered a measure of dignity

compared to the noxious conditions of low-wage hourly legal work.¹³² Put another way, crack markets opened in the context of the very same poverty traps where earlier homicide epidemics were the most salient.

The systemic violence that Professor Goldstein described spread in these cities: Conflicts between dealers and between dealers and customers created a context in which violence was the most reliable form of resolving disputes.¹³³ Dealers themselves were often targets for ordinary robberies because they carried large amounts of cash and worked on street corners with little protection from police or others in their drug-selling clique.¹³⁴ Violence also was used by drug organizations to maintain discipline and ensure loyalty so that lower-level retail sellers would be deterred from skimming profits from the wholesalers.¹³⁵

As in earlier drug epidemics, the crack-cocaine epidemic eventually peaked, reaching its apex in the early 1990s, and then began to recede as the supply of new users was exhausted and older users ceased using crack. Extraordinary law enforcement resources were allocated to controlling crack markets, including federal as well as local enforcement.¹³⁶ This combination of intensive criminal justice intervention and the natural cessation of the crack epidemic in the early 1990s also contributed to the downward trend in murder and other forms of criminal violence. Without the impetus of emerging and volatile drug markets—a major animating feature of the previous three consecutive epidemics—the next two decades saw a decline in murders across the country. While there were city-specific trends for short-term disruptions

132. See Bourgois, *supra* note 125, at 98–99 (discussing crack dealers’ stories of “rejecting what they considered to be intolerable working conditions at entry-level legal jobs” and their dependence on the “crack economy for economic survival and personal dignity”).

Rasmussen & Bruce L. Benson, *Rationalizing Drug Policy Under Federalism*, 30 *Fla. St. U. L. Rev.* 679, 714 (2003) (describing the growth of law enforcement measures at all levels to address drug crime).

in the pattern of decline, the absence of these animating contexts helped keep the disruptions short.

C. *A New Epidemic?*

The current upward trend, even for the 2015–2016 period, seems to coincide with an increase in heroin use and abuse of other forms of opioids across the nation.¹³⁷ But facts challenge the notion that another homicide epidemic is underway or that the increase in homicide is fueled by yet another era of drug addiction and violence in its distribution networks.

First, the onset of this opioid epidemic predated the recent rise in homicides. In previous eras, the onset of the epidemics of drugs and homicide were closely correlated in time and space in urban centers through the late 1990s.¹³⁸ The opioid epidemic, mainly in rural America, began approximately in 2000,¹³⁹ as homicides were well into their twenty-year decline. From 2000 to 2014, the rate of drug overdose deaths increased by 137%—in 2014, about 60% of those excess deaths from drug overdoses were due to opioid use.¹⁴⁰ In 2009, the death rate from opioids surpassed the death rate from motor vehicle accidents.¹⁴¹ Deaths from prescription opioid pain medications rose by nearly 400% from 1999 to 2014.¹⁴² However, Figure 3 shows that the homicide rate nationally did not begin to rise until 2015¹⁴³ in some cities and later in several others.

143. See Richard Rosenfeld, *supra* note 79, at 6 (showing homicide rate increases in large cities beginning in 2015).

Second, unlike the drug epidemics from the 1960s to the 1990s, opioid addiction is more likely to affect Whites than other racial or ethnic groups and to be centered outside urban areas.¹⁴⁴ Heroin and opioid mortality rates in 2014 were more than two times greater for Whites than Blacks or Latinos.¹⁴⁵ This is in contrast to the 1960s, when Blacks and Latinos were far more likely to die from heroin than Whites.¹⁴⁶ This shift in the demography of drug abuse relocates the drug–homicide connection away from the populations and communities most at risk for homicide mortality.¹⁴⁷

Third, the spatial distribution of the opioid epidemic suggests a diffusion of heroin and opioid use away from the nation’s urban centers since 2000.¹⁴⁸ For example, heroin and opioid overdoses in California in 2013 also were highest in the state’s rural counties, including Shasta, Placer, and El Dorado counties.¹⁴⁹ In general, county-level rates of overdose deaths from heroin and prescription opioids remained higher in rural areas than in the urban centers.¹⁵⁰ Even without an acute opioid epidemic in cities, homicide rates in cities have remained higher than in

144. Haeyoun Park & Matthew Bloch, *How the Epidemic of Drug Overdose Ripples Across America*, N.Y. Times (Jan. 19, 2016), <http://nyti.ms/2jVUIKb> (on file with the *Columbia Law Review*) (visually showing the spread of heroin overdose deaths from a small set of rural areas in 2003 to much of the western United States and Appalachian areas by 2014).

145. See Nolan & Amico, *supra* note 137 (“By 2014, whites and Native Americans were dying at double or triple the rates of African-Americans and Latinos, according to the CDC.”). The Centers for Disease Control and Prevention has not yet published heroin or opioid addiction overdose mortality rates for 2015 or 2016.

146. See Hunt, *supra* note 110, at 23 (explaining heroin addicts in treatment in 1974 were predominantly Black men); Johnson et al., *Drug Abuse in the Inner City*, *supra* note 110, at 14 (explaining heroin use “exploded during the period 1965–73” among minorities but that since that time “much lower proportions of blacks have been initiating heroin use”); see also Theodore J. Cicero et al., *The Changing Face of Heroin Use in the United States: A Retrospective Analysis over the Past 50 Years*, 71 *JAMA Psychiatry* 821, 825 (2014) (“Although minority groups were predominant [heroin] users in the 1960s and 1970s, nearly 90% of respondents who began use in the last decade were white.”).

147. Peterson & Krivo, *supra* note 78, at 13 (noting “the rate of homicide offending and victimization was six to seven and a half times higher for African Americans than for whites each year from 2000 to 2005”).

150. Park & Bloch, *supra* note 144.

rural or suburban areas for the past fifty years,¹⁵¹ particularly in places where racial residential segregation also remains concentrated.¹⁵² Explanations for the diffusion include higher rates of opioid prescriptions in rural areas, an outmigration of young adults from cities and suburbs to rural areas, denser kinship and social networks in rural areas that may facilitate drug diversion from legal to illegal channels, and economic stressors that heighten vulnerability to drug use generally.¹⁵³ Users may also minimize the perceived harm of pharmaceutical opioids, owing to their oral ingestion that avoids the stigma and health complications of injection.¹⁵⁴

In cities, heroin deaths have also increased since 2010, but the increase is not skewed by race. St. Louis, for example, is one of the cities with a sharp spike in murders in the past five years.¹⁵⁵ And while the heroin overdose rate rose in St. Louis from 2010 to 2014, the rate of heroin overdose deaths was slightly higher for Whites (10.7 per 100,000 persons) than Blacks (10.0 per 100,000 persons).¹⁵⁶ The rate increased from 2013 to 2014 nearly identically for Black and White persons at the same time that homicides were spiking.¹⁵⁷ Yet Black persons were more likely to be homicide victims during much of this period, despite the racial balance in heroin overdose deaths.¹⁵⁸

Overall, the current two-year increase in homicide rates in cities may be driven or animated by factors that differ from the commonalities of the drug epidemics that coincided with the previous three cascading

homicide epidemics. The evidence, then, points away from the concurrent-epidemic explanation for a homicide spike in the past two years.

D. *Alternate Explanations for the 2015–2016 Trend*

The concurrent-epidemic explanation for past homicide epidemics has its critics: Some researchers have minimized the drug-epidemic explanation and pointed to different drivers of the 1980s–1990s homicide epidemic. Their work might provide alternate explanations for the 2015–2016 trends. For example, Professors Philip Cook and John Laub cite the convergence of larger birth cohorts with increased gun availability to explain the spike in homicide in the previous era.¹⁵⁹ This explanation seems to comport with the contours of the current epidemic, particularly in its concentration in cities and the elevated rates of victimization among young Black and Latino males. Professors Cook and Laub also note an increasing concentration in homicides among minority males in the past epidemic, a generally downward age trend in homicide offending, an increasing concentration of homicides in structurally disadvantaged urban areas, and an increasing share of homicides committed with guns.¹⁶⁰ Again, these contours seem to reflect the recent spike in homicides.

Several studies also cited increased gun availability as an explanation for the previous epidemic.¹⁶¹ Professors Fagan, Franklin Zimring and June Kim characterized the homicide epidemic from 1986 to 1995 as a gun violence epidemic—rather than a homicide or violence epidemic—that afflicted young minority males disproportionately.¹⁶² They showed that from 1985 to 1996, nearly all the increase and decline in homicide,

159. Philip J. Cook & John H. Laub, *The Unprecedented Epidemic in Youth Violence*, 24 *Crime & Just.* 27, 29, 58–59 (1998) [hereinafter, Cook & Laub, *Unprecedented Epidemic*] (noting negative correlation between youth population and rates of violent crime). However, in a later article, Professors Cook and Laub outright reject the birth-cohort explanation. Philip J. Cook & John H. Laub, *After the Epidemic: Recent Trends in Youth Violence in the United States*, 29 *Crime & Just.* 1, 23 (2002) [hereinafter Cook & Laub, *After the Epidemic*] (rejecting cohort effects as an explanation for the epidemic and noting contradictions in the drug–homicide nexus that mitigate but do not eliminate its explanatory power).

160. See Cook & Laub, *Unprecedented Epidemic*, supra note 159, at 29 (connecting the availability of guns with rates of violence among youths).

161. See, e.g., Franklin E. Zimring & Gordon Hawkins, *Crime Is Not the Problem: Lethal Violence in America* 106–23 (1997) (discussing the role of guns in increasing death from violence); see also Anthony A. Braga, *Serious Youth Gun Offenders and the Epidemic of Youth Violence in Boston*, 19 *J. Quantitative Criminology* 33, 51–52 (2003) (finding that in Boston “violence that was highly concentrated among serious youth offenders who carried high capacity semiautomatic pistols and used their guns in an increasingly deadly way”).

162. See, e.g., Jeffrey Fagan, Franklin E. Zimring & June Kim, *Declining Homicide in New York City: A Tale of Two Trends*, 88 *J. Crim. L. & Criminology* 1277, 1289, 1291–96 (1998).

assault, and other injury violence was the result of gun violence and that non-gun violence rates remained unchanged.¹⁶³ Professors Fagan and Garth Davies showed a similar pattern of rising and falling gun violence rates across neighborhoods from 1986 to 2000, characterizing some neighborhoods as experiencing an acute contagious epidemic, while others experienced rates that rose more slowly and declined more slowly, in a pattern suggesting a “slow epidemic.”¹⁶⁴ In the places with more acute epidemic patterns, neighborhood social structure suggested an ecological explanation for the differences in violence and injury epidemics across neighborhoods over time.¹⁶⁵ Today, there are similar patterns, with spatial concentration of homicides in cities including Chicago¹⁶⁶ and Milwaukee.¹⁶⁷

Professor Alfred Blumstein cited increased firearm availability nationally as a driver of the 1985–1993 homicide epidemic, linking firearms with expanding drug-distribution networks that were centered (though not exclusively) in street-gang conflicts.¹⁶⁸ Others also focused on street gangs to explain the urban concentration of homicide in that era, but these studies also shifted attention from the gangs themselves to social structural changes that were predictive of gang formation and spread starting in the mid-1980s.¹⁶⁹ Again, these factors are reflected in the current patterns in Chicago but not necessarily in other cities (e.g., Baltimore, St. Louis) that also experienced recent homicide spikes.¹⁷⁰ It is important to remember that Chicago’s two-year increase is an outlier in

169. See, e.g., S.E. Costanza & Ronald Helms, *Street Gangs and Aggregate Homicides: An Analysis of Effects During the 1990s Violent Crime Peak*, 16 *Homicide Stud.* 280, 282 (2012) (establishing quantitative support for the assertion “that activities associated with expanding markets in drugs and guns, at least some of which are facilitated through the activities of local gangs, very likely contribute to aggregate patterns of lethal violence across urban landscapes”).

170. See Ford Fessenden & Haeyoun Park, *Chicago’s Murder Problem*, *N.Y. Times* (May 27, 2016), <http://nyti.ms/2jR2kKO> (on file with the *Columbia Law Review*) (discussing the increasing role gangs and guns play in Chicago’s violence).

its magnitude due to the size of the city: Figure 3 shows that Chicago did experience an increase in homicides far greater than the nation's two other largest cities, but Figure 4 shows that several midsize cities also experienced sharp homicide increases during the same period—including increases in the per capita homicide rates—and that their homicide rates exceeded Chicago's during the same period.¹⁷¹ Yet Chicago has gained political, media, and institutional notoriety when other cities have not.¹⁷² Chicago accounted for 272 of the 606 “excess” homicides in 2016 compared to 2015, or 44.8% of the homicide increases in sixty-three of the nation's largest cities.¹⁷³ Excluding Chicago and excluding the forty-nine deaths in the Pulse Night Club mass shooting in Orlando, Florida,¹⁷⁴ the increase across these sixty-three cities was 4.6%.¹⁷⁵ This is a sizable increase but not the sort of systemic increase that forecasts an epidemic.

E. *The Danger of Predictions*

The ingredients of the homicide spikes of the past fifty years are either not present today or perhaps are less salient. We are in a period of uncertainty as to what happens this year and beyond. Certainly, the scope of major homicide increases, such as in Chicago, demands attention. But so too do homicide spikes in several other large (e.g., Detroit) and midsize (e.g., St. Louis, Baltimore, Milwaukee, Nashville) cities. The increases in 2016—Chicago notwithstanding—were concentrated in smaller cities, while homicides declined in several others. Figure 4 shows that some cities with large homicide increases in 2015 experienced homicide declines in 2016. Others stabilized. Whether these are random walks in a new period of instability in homicide rates, temporary blips in a longer historical trend of declining homicide rates, or harbingers of a new homicide epidemic is impossible to say.¹⁷⁶

175. See Major Cities Chiefs Ass'n, *supra* note 173, at 1–3.

176. See, e.g., David F. Greenberg, *Time Series Analysis of Crime Rates*, 17 *J. Quantitative Criminology* 291, 300–301 (2001) (noting it “is unrealistic to suppose,

Prediction is a risky business, and forecasting another homicide epidemic would be unwise and unfounded. Professors Cook and Laub conclude that the combination of volatility in violence rates and the difficulty of testing counterfactuals for each of the overlapping plausible explanations may require both long time horizons and complex research designs to understand the ebb and flow of violence epidemics, the differences across cities, the persons and neighborhoods affected, and the variation in duration and intensity from one place to the next and over different epochs.¹⁷⁷ We may have a better idea of how epidemics might launch, but those predictions are fraught with error. And once started, there are even greater risks of error in predicting their duration or severity. Figure 4 alone shows the number of momentary bumps in homicide rates that might have appeared to be the start of a new epidemic but that in fact were simply random perturbations in an overall pattern of decline.

Mistakes can have disastrous consequences: Predictions in the mid-1990s of a new epidemic of predatory violence by a new generation of “superpredators”—even as violence declined after a decade-long epidemic—were widely cited to justify significant and harsh changes in the state and federal law,¹⁷⁸ and led to profound but unnecessary changes in law and policy regarding youth violence.¹⁷⁹ Soon enough, the

however, that the same generating process responsible for temporal changes in crime will continue unchanged forever”).

177. Cook & Laub, *After the Epidemic*, supra note 159, at 30–31 (making such conclusions in the context of examining youth violence).

178. See, e.g., William J. Bennett, John J. Dilulio, Jr. & John P. Walters, *Body Count* 13–14 (1996) (explaining in 1996 that Americans have become “desensitized” to crime and that the dropping crime rates of the early 1990s might be “the lull before the coming crime storm”); see also John J. Dilulio Jr., *The Coming of the Super-Predators*, *Wkly. Standard* (Nov. 27, 1995), <http://www.weeklystandard.com/the-coming-of-the-super-predators/article/8160#>! [<http://perma.cc/M3L5-4QWC>]. The “superpredator” myth was translated into a forecast of the archetypical “symbolic assailant.” Jerome Skolnick identified this archetype as a police trope for Black males based on his research with police in the 1960s at the peak of one of the three homicide epidemics in the United States. See Jerome H. Skolnick, *Justice Without Trial: Law Enforcement in a Democratic Society* 45–48 (1966) (describing the “symbolic assailant” as “persons who use gesture, language, and attire that the policeman has come to recognize as a prelude to violence”).

179. In 1995 alone, nearly half the states changed their laws to facilitate the criminal prosecution of minors who were charged with any felony crime, including both violent and property crimes. Donna M. Bishop, *Juvenile Offenders in the Adult Criminal System*, 27 *Crime & Just.* 81, 84 (2000); Lara A. Bazelon, Note, *Exploding the Superpredator Myth: Why Infancy Is the Preadolescent’s Best Defense in Juvenile Court*, 75 *N.Y.U. L. Rev.* 159, 178 & n.101 (2000); see also Cook & Laub, *After the Epidemic*, supra note 159, at 20 (“Explanations that attributed rising violence rates to the character of the youths . . . proved influential with legislators, who in most states responded to the epidemic with more punitive policies for juvenile crime.”); Jeffrey Fagan, *Juvenile Crime and Criminal Justice: Resolving Border Disputes*, 18 *Future Child.* 81, 83 (2008) [hereinafter Fagan, *Border Disputes*] (finding “evidence shows that policies promoting transfer of adolescents from juvenile to criminal court” enacted in response to rising juvenile crime rates in the 1970s and 1980s “fail to deter crime among sanctioned juveniles and may even worsen

sustained decline in homicide starting in the mid-1990s proved that prediction to be tragically flawed, leaving a statutory legacy with the perverse effect of increasing criminality among young offenders¹⁸⁰ while aggravating racial disparities.¹⁸¹

The risks of a false prediction stand in tension with the demands for public safety: Police executives do not have the luxury of waiting to see whether homicide spikes will end with a reversion to the mean. At risk on both sides of this equation is the trust of communities in criminal legal institutions, especially the police. And with trust comes legitimacy and partnership with legal actors in the coproduction of security.¹⁸² Just as fair and legal treatment promotes trust, so too does effective policing in ensuring public safety. These are the immediate challenges for police,

public safety risks”). See generally Barry C. Feld, *Bad Kids: Race and the Transformation of the Juvenile Court* (1999) (examining the evolution of juvenile courts and the problematic shift toward rejecting the recognition of a need for separate kinds of treatment of minors in the juvenile justice system); Franklin E. Zimring, *American Youth Violence: A Cautionary Tale*, 42 *Crime & Just.* 265 (2013) (examining faulty assumptions that caused exaggerated warnings of future surges in youth violence).

180. Fagan, *Border Disputes*, *supra* note 179, at 84 (examining failure of transfer policies); Robert Hahn et al., *Ctrs. for Disease Control & Prevention, Effects on Violence of Laws and Policies Facilitating the Transfer of Youth from the Juvenile to the Adult Justice System: A Report on Recommendations of the Task Force on Community Preventive Services, Morbidity & Mortality Wkly. Rep.: Recommendations & Rep.*, Nov. 30, 2007, at 1, 9, <http://www.cdc.gov/mmwr/pdf/rr/rr5609.pdf> [<http://perma.cc/Q9Y2-Y36V>] (“To the extent that transfer policies are implemented to reduce violent or other criminal behavior, available evidence indicates that they do more harm than good.”); Lonn Lanza-Kaduce et al., *Juvenile Offenders and Adult Felony Recidivism: The Impact of Transfer*, 28 *J. Crime & Just.* 59, 60 (2005) (“Contrary to the expectations of the proponents of ‘get-tough’ policies, previous research generally found that transfer is related to higher rather than lower rates of recidivism.”); Franklin E. Zimring & Stephen Rushin, *Did Changes in Juvenile Sanctions Reduce Juvenile Crime Rates? A Natural Experiment*, 11 *Ohio St. J. Crim. L.* 57, 69 (2013) (producing statistical analysis revealing “changes in juvenile homicide rates were highly similar to changes in young adult homicide rates, despite the national wave of legislation targeted at juvenile offenders,” which “undercuts” the causal claim between the decrease and such statutory changes).

181. See Feld, *supra* note 179, at 5 (noting “punitive juvenile justice policies impose harsh sanctions disproportionately on minority youths and foster the growing procedural and substantive convergence between juvenile and criminal courts”); Donna M. Bishop & Charles E. Frazier, *Race Effects in Juvenile Justice Decision-Making: Findings of a Statewide Analysis*, 86 *J. Crim. L. & Criminology* 392, 412 (1996) (“The quantitative analyses demonstrate appreciable effects of race on delinquency case processing that disadvantage minority offenders.”).

182. Tom Tyler & Yuen J. Ho, *Trust in the Law: Encouraging Cooperation with the Police and the Courts* 65–67 (2002) (asserting “trust in particular individuals that develops by virtue of their actions . . . lead[s] to inferences that the decisions of the authorities should be accepted”); Tom R. Tyler et al., *Street Stops and Police Legitimacy: Teachable Moments in Young Urban Men’s Legal Socialization*, 11 *J. Empirical Legal Stud.* 751, 775 (2014) [hereinafter Tyler et al., *Teachable Moments*] (demonstrating “higher legitimacy is related to lower levels of criminal behavior and also demonstrat[ing] that cooperation with the police is greater when legitimacy is high”).

communities, and government. We turn next to a framework and principles to meet these challenges.

III. THE ECOLOGY OF POLICING, CYNICISM, AND VIOLENCE

Even as crime rates declined for two decades, tensions between citizens and police rose, especially among African Americans¹⁸³ and, to a lesser extent, among Latinos.¹⁸⁴ In the 1990s, at the outset of the homicide and general crime decline, much of the distrust was focused on racial profiling by police.¹⁸⁵ Over time, minority citizens' distrust of police expanded to include police use of force¹⁸⁶ and, later, everyday policing of disorder.¹⁸⁷ But as these tensions became more salient in minority communities, police were less likely to see their use of force as unjustified.¹⁸⁸ Even as citizen distrust of police differed along racial lines,

183. Ronald Weitzer & Steven A. Tuch, *Race and Policing in America: Conflict and Reform 70–88* (2006) (presenting evidence of perceptions of racially biased policing and the impact on minority communities); Lawrence D. Bobo & Devon Johnson, *A Taste for Punishment: Black and White Americans' Views on the Death Penalty and the War on Drugs*, 1 *Du Bois Rev.* 151, 170 (2004) (noting changes in the criminal justice system have taken a “heavily disproportionate toll on Black communities, especially low-income Black communities”); David A. Harris, *The Stories, the Statistics, and the Law: Why Driving While Black Matters*, 84 *Minn. L. Rev.* 265, 269 (1999) (establishing the problem of “driving while black”).

184. Mark Hugo Lopez & Gretchen Livingston, *Pew Hispanic Research Ctr., Hispanics and the Criminal Justice System: Low Confidence, High Exposure 1* (2009), http://www.prisonlegalnews.org/media/publications/pew_hispanic_center_hispanics_and_the_criminal_justice_system_2009.pdf [<http://perma.cc/4MUK-SP7C>] (“At a time when Latinos are interacting more than ever with police, courts and prisons, their confidence in the U.S. criminal justice system is closer to the low levels expressed by blacks than to the high levels expressed by whites.”).

185. See generally R. Richard Banks, *Beyond Profiling: Race, Policing and the Drug War*, 56 *Stan. L. Rev.* 571 (2003) (noting the existing “focus on racial profiling” and arguing that “policy analyses should consider the race-related consequences of the drug war, without regard to whether officers engage in racial profiling”); Harris, *supra* note 183, at 277–88 (surveying the statistical analysis of racial distribution of traffic stops in New Jersey, Maryland, and Ohio); Anthony Thompson, *Stopping the Usual Suspects: Race and the Fourth Amendment*, 74 *N.Y.U. L. Rev.* 956, 956–59 (1999) (noting “[r]ecent studies support” that “the police target people of color, particularly African Americans, for stops and frisks”).

186. Steven A. Tuch & Ronald Weitzer, *Racial Differences in Attitudes Toward Police*, 61 *Pub. Opinion Q.* 642, 647 (1997) (showing stronger negative reactions by Blacks compared to Whites in responses to highly publicized incidents of police use of force).

187. Kirk & Papachristos, *supra* note 84, at 1198 (noting in “socially and economically disadvantaged neighborhoods, people come to understand that the [police] will offer them little in the way of security, either economic or personal”); Tyler et al., *Teachable Moments*, *supra* note 182, at 771 (noting “adverse effects of an increasing number of police stops on perceptions of fairness and legality, both in terms of views about personal experience and with general judgments about police behavior”).

188. David Weisburd et al., *Nat'l Inst. of Justice, Police Attitudes Toward Abuse of Authority: Findings from a National Study 5* (2000) <http://www.ncjrs.gov/pdffiles1/>

there still was broad support for use of force in intimate police cultures and subcultures.¹⁸⁹ Today, that support is racialized within police departments: White and Latino police officers tend to view fatal encounters between Blacks and police as isolated incidents in contrast to the views of a majority of Black officers.¹⁹⁰

In the past decade, these tensions were exacerbated by highly publicized police shootings of citizens—shootings that were often captured on video and replayed on television and the Internet. Citizens expressed deep anger over these incidents, often in political demonstrations. Police pushed back politically to those demonstrations, and there were signs of a police withdrawal in the face of criticism and citizen anger.¹⁹¹ These exchanges only magnified the distrust between citizens and police. These incidents tapped into Black citizens' longstanding distrust of the police that was evident for well over a decade before the current increase in homicides and remains acute today.¹⁹² Anger and distrust for police grew alongside not just incidents of police violence toward citizens but police programs that encouraged investigative stops and arrests and summonses for minor crimes and violations—tactics that disproportionately affected Black and Latino citizens.¹⁹³

Kuhns, *Striking Out: Race and Support for Police Use of Force*, 26 *Just. Q.* 592, 597 (2009) (citing research reporting race is strongest predictor of support for use of force and that Whites are more likely to support use of force than Blacks); Jason Sunshine & Tom R. Tyler, *The Role of Procedural Justice and Legitimacy in Shaping Public Support for Policing*, 37 *Law & Soc'y Rev.* 513, 515 (2003) (citing studies revealing minorities hold “much more negative attitudes about the police” and “have lower trust and confidence in institutions of social control”); Brian L. Thompson & James Daniel Lee, Jr., *Who Cares if Police Become Violent? Explaining Approval of Police Use of Force Using a National Sample*, 74 *Soc. Inquiry* 381, 383–84 (2004) (citing studies finding minorities “generally disapprove of police violence” and “feel the criminal justice system is biased”); Ronald Weitzer & Steven A. Tuch, *Race and Perceptions of Police Misconduct*, 51 *Soc. Probs.* 305, 305 (2004) (“[R]ace is one of the most salient predictors of attitudes toward the police and other criminal justice institutions: blacks are more likely than whites to express dissatisfaction with various aspects of policing.”).

193. Jeffrey Fagan et al., *Stops and Stares: Street Stops, Surveillance and Race in the New Policing*, 43 *Fordham Urb. L.J.* (forthcoming 2017) (manuscript at 21–22) (on file with the *Columbia Law Review*) (discussing the disproportionate racial impact of increased investigative stops, searches, and arrests); see also Jeffrey Fagan & Tracey L. Mearns,

The distrust today is a two-way street. Police regard protests of high-visibility police shootings of citizens as motivated less by the perceived injustice of those shootings and more by bias against police.¹⁹⁴ Only about one in three officers thinks protesters are sincerely motivated by a desire to hold officers accountable.¹⁹⁵ This may result in what this Essay previously touched on—signs of a police pullback or withdrawal in the face of citizen and political criticism, extensive video surveillance and publicity of contested police actions, and even killings of police.¹⁹⁶ In other words, it could lead to de-policing. In Chicago, this was evident in the form of sharply reduced *Terry* stops following the release of a police video of the shooting of Laquan McDonald, an unarmed teenager who was fleeing from police.¹⁹⁷ In Baltimore, arrests for less-serious felonies and misdemeanors declined substantially in the period between the August 2014 demonstrations over the police killing of Michael Brown in Ferguson, Missouri, and the April 2015 death of Freddie Gray in Baltimore.¹⁹⁸ At the same time, homicides in Baltimore increased sharply during the police slowdown,¹⁹⁹ but then declined in 2016 as arrests resumed.²⁰⁰ While police officers describe a general withdrawal by police, they offer few specifics as to their own or their colleagues' actions.²⁰¹ Clearly, there is evidence of a pullback in Chicago and Baltimore, but to date, there is no support beyond anecdotes for claims of a general withdrawal.²⁰²

Punishment, Deterrence and Social Control: The Paradox of Punishment in Minority Communities, 6 Ohio St. J. Crim. L. 173, 219–20 (2008) (describing the rise in order-maintenance policing and its disproportionate effect on Black and Latino citizens); Tyler et al., Teachable Moments, supra note 182, at 755–56 (discussing the rise of *Terry* stops and “proactive policing” and identifying the practices’ disproportionate effect on minorities).

194. Morin et al., supra note 23, at 17–18 (finding 92% of police officers believe that bias against the police is at least partially motivating these protests).

201. Morin et al., supra note 23, at 4. But see id. at 45 (finding more officers worry about colleagues spending too much time diagnosing before acting on a situation).

202. See Mac Donald, supra note 79 (offering anecdotal evidence to support the conclusion that “proactive policing is down”); Rosenfeld, supra note 79 at 18–23 (arguing more empirical evidence is needed to analyze the legitimacy of a “Ferguson effect” that has caused police to supposedly “disengage from their duties”).

Although it is unclear whether any increase in the homicide rate can be attributed to a police pullback, the pullback is part of a loosely coupled system of distrust and resentment between citizens and police that entwines violence, cynicism, and public safety into a complex and tangled ecology. For us, the language of a “chill wind” adopted by FBI Director Comey²⁰³ is meant to capture the connections in these mechanisms and their consequences for urban homicide. We turn next to how this tangled ecology plays out in the enduring homicide problems of several U.S. cities.

A. *Case Studies: Cynicism, Withdrawal, and the Persistence of Homicides*

In several cities, people living in neighborhoods where homicide is a recurring reality share a strikingly similar narrative about policing, community, and murder. In this narrative, murders are not uncommon but remain unsolved, citizens experience policing as detached from serious crime and aimed at the wrong behaviors and the wrong people, they see police as indifferent or disrespectful if not abusive, and they are unwilling to cooperate in murder investigations by the police, whom they view as an “occupation force.” These interlocking tensions reinforce the social and economic isolation of places that already have the features of a “poverty trap.”²⁰⁴ Residents feel not only unsafe but unfairly treated.

In this web of recurring social interactions, these perceptions—a variety of police insults and recurring episodes of murder and other violence—engender frustration and anger and, in turn, withdrawal from cooperation with the police.²⁰⁵ Citizens see the police as indifferent to their concerns, raising dignitarian issues that deepen the sense of isolation and powerlessness before the police.²⁰⁶ And as we have noted, criticisms of the police—who also feel isolated by very salient incidents of

203. See Comey, Remarks at University of Chicago, *supra* note 79 (describing a “chill wind blowing through American law enforcement”).

Bell, *Police Reform & the Dismantling of Legal Estrangement*, 126 *Yale L.J.* (forthcoming 2017) (manuscript at 7–8) (on file with the *Columbia Law Review*) (explaining the concept of “legal estrangement”); Matthew Desmond, Andrew V. Papachristos & David S. Kirk, *Police Violence and Citizen Crime Reporting in the Black Community*, 81 *Am. Soc. Rev.* 857, 858 (2016) [hereinafter Desmond et al., *Police Violence and Citizen Crime Reporting*] (describing “legal cynicism” and the resulting withdrawal from the police); David S. Kirk & Mauri Matsuda, *Legal Cynicism, Collective Efficacy, and the Ecology of Arrest*, 49 *Criminology* 443, 444 (2011) (explaining “legal cynicism” as a “cultural frame in which the law and the agents of its enforcement are viewed as *illegitimate, unresponsive, and ill equipped* to ensure public safety”); Robert J. Sampson & Dawn Jeglum Bartusch, *Legal Cynicism and (Subcultural?) Tolerance of Deviance: The Neighborhood Context of Racial Differences*, 32 *Law & Soc’y Rev.* 777, 783 (1998) (“[I]nner-city contexts of racial segregation and concentrated disadvantage, where inability to influence the structures of power that constrain lives is greatest, also breed cynicism and perceptions of legal injustice.”).

206. I. Bennet Capers, *Policing, Race, and Place*, 44 *Harv. C.R.-C.L. L. Rev.* 43, 68–69 (2009) (stating similar claims in terms of “public shaming”).

police deaths—foster resentments that match the resentments of those living in conditions of simultaneous over- and underpolicing.

1. *Los Angeles*. — In April 2016, L.A. police commanders deployed a surge in South L.A. to counter an uptick in the homicide rate in the area.²⁰⁷ Nearly half the violent gun crimes in the city take place in South L.A., and the homicide rate had been rising citywide for the past three years.²⁰⁸ Officers from the elite Los Angeles Police Department Metropolitan Division flooded the area—a predominantly Black and Latino part of the city—and intensified their stop activity to search for weapons, scofflaws, or fugitives.²⁰⁹ They stopped drivers for infractions such as tinted windows or broken taillights as a pretext to search for guns or identify persons who were wanted on outstanding warrants.²¹⁰ The surge netted 300 illegal firearms in six months.²¹¹

While the homicide rate declined in South L.A. during the surge, police tactics alienated Black residents. A 2016 survey conducted for the Los Angeles Police Commission—after the homicide rate in South L.A. had declined to the same levels as a year earlier—showed deep distrust and anger toward the police among African American residents, leading to a “profoundly serious disconnect” between the LAPD and the city’s Black citizens.²¹² Black respondents to the survey complained of repeated stops, disrespect from police, and the types of “petty indignit[ies]” and baseless police stops that the *Terry* court feared²¹³ but whose pretextual

213. See *Terry v. Ohio*, 392 U.S. 1, 16–17 (1968); see also Bell, *supra* note 205, at 56–57 (noting “police cases more than others send messages about social inclusion” and that programs like the systematic stop-and-frisks at issue in *Terry* can result in “legal estrangement”); Josh Bowers, Probable Cause, Constitutional Reasonableness, and the Unrecognized Point of a “Pointless Indignity,” 66 *Stan. L. Rev.* 987, 1008 (2014) (noting the *Terry* Court’s fear that many frisks are “*wholly unrelated to a desire to prosecute for crime*” (alteration in original) (quoting *Terry*, 392 U.S. at 13)); Capers, *supra* note 206, at 64 (noting *Terry*’s implicit acknowledgement of the disproportionate impact of its decision on disadvantaged communities); William J. Stuntz, *Terry*’s Impossibility, 72 *St. John’s L. Rev.*

basis the Court sanctioned in *United States v. Whren*.²¹⁴

The other source of alienation and cynicism of the residents in South L.A. was the inability of police to “clear” a homicide, that is, to make an arrest in that case.²¹⁵ Clearance rates in L.A. citywide were below the national average of 62.5% for the period 2009 to 2012 and averaged 38% for the period from 1994 to 2006.²¹⁶ Current data show that homicide clearance rates improved from 60.2% in 2012 to 68.1% in 2015.²¹⁷ Still, homicide clearance rates vary by police district and seem to have remained stubbornly low for South L.A. for over two decades.²¹⁸ Residents there interpreted the low clearance rate as indifference to Black homicides, one part of the L.A. Black community’s belief that police favor White crime victims.²¹⁹

1213, 1218 (1998) (describing four distinct harms—privacy harm, targeting harm, discrimination, and physical harm—suffered by victims of unreasonable police stops). The reactions of Blacks in South L.A. to being stopped mirrors the sense of racial targeting that Professor Bennett Capers discusses in his research into race-based public shaming. See Capers, *supra* note 206, at 68–69.

214. See Chang, *Biggest Conundrum*, *supra* note 207; see also *Whren v. United States*, 517 U.S. 806, 812 (1996) (noting the Supreme Court has “never held, outside of inventory search or administrative inspection . . . that an officer’s motive invalidates objectively justifiable behavior under the Fourth Amendment”).

215. See Jill Leovy, *Ghettoside: A True Story of Murder in America* 48–49 (2015) (discussing clearance rates in L.A. County and South L.A.).

216. See Cal. Dep’t of Justice, *Crimes and Clearance*, OpenJustice, <http://openjustice.doj.ca.gov/crime-statistics/crimes-clearances> (on file with the *Columbia Law Review*) (last visited Mar. 2, 2017) (providing data for clearance rates in L.A. County through 2015).

217. *Id.* The most recent data are from 2015. *Id.*; see also L.A. Police Comm’n, *Investigation of the Los Angeles Police Department’s Homicide Clearance Rates 4* (2015), http://www.lapdpolicecom.lacity.org/072115/BPC_15-0214.pdf [<http://perma.cc/5UFT-4J38>].

218. See Chang, *Biggest Conundrum*, *supra* note 207; see also Leovy, *supra* note 215, at 48–49; Tammy Rinehart Kochel, *Applying Police Legitimacy, Cooperation, and Collective Security Hypotheses to Explain Collective Efficacy and Violence Across Neighborhoods*, *Int’l J. Comp. & Applied Crim. Just.*, 2017, at 1, 14 (finding that police competence in maintaining public safety in neighborhoods encourages citizens to cooperate with police and engage in their own efforts independent of police to “co-produce social order”); Nicholas Peterson, *Neighborhood Context and Unsolved Murders: The Social Ecology of Homicide Investigations*, 27 *Policing & Society* 372, 383 (2015) (showing that, for all homicides in Los Angeles between 1990 and 1994, the odds of clearing a homicide decline by 50% for each 1% increase in the Black population of a neighborhood, and decline by 31% for each 1% increase in the Latino population of a neighborhood).

219. See Mather & Chang, *supra* note 212 (describing stark racial disparities in L.A. residents’ perceptions of the police force’s trustworthiness). The distrust and anger of citizens in Los Angeles toward the police has deepened even further this year. In a 2017 survey by Loyola Marymount University, researchers reported that nearly 7 out of 10 respondents between ages eighteen and twenty-nine predict that a repeat of the 1992 Rodney King riots will happen within the next five years, an increase of 33% from the 2012 survey. Fernando Guerra, Brianna Gilbert & Berto Solis, *LA Riots 25 Years Later: 2017 Los*

The low homicide clearance rate “left killers at large and families of murder victims without answers.”²²⁰ In this setting, a dragnet of intrusive stops—simply harassment to many residents of South L.A.²²¹—produced little offset in justice and led to alienation and cynicism that, along with fear of retribution from local crime groups and offenders, deterred residents in the neighborhood from helping police to solve murders.²²² Furthermore, more experienced and capable detectives sought out “better” assignments in wealthier neighborhoods, avoiding the Black neighborhoods most in need, which compounded and reinforced the dynamics of unsolved murders and cynicism among local residents.²²³

2. *New York City*. — New York City has become a safe city. In 2016, the number of shootings dropped by 12% to 998; this was the first time that shootings fell below 1,000 since shooting data were compiled.²²⁴ Murders dropped from 352 to 335 in the same period, reversing a one-year increase in 2015. Overall, the total crime rate dropped by 4%, with a yearly reduction in almost every major category of crime, including major felonies.²²⁵ This downward trend continues a decline that began in 1992 and has continued nearly uninterrupted for twenty-five years.²²⁶ Still, crime rose by 2.4% in the NYPD Housing Bureau,²²⁷ which is significant because it is mainly in the city’s housing projects that a complex ecology of policing, poverty, cynicism, and violence churns.²²⁸

As in L.A., the highest homicide area in New York City, the South Bronx, has had the fewest detectives assigned per violent crime.²²⁹ The underpolicing in this police precinct is common to the rest of the Bronx, an area with a population of 1,455,444 in 2015²³⁰ and the city's highest per capita murder rate.²³¹ Journalists covering the Bronx quote citizens' reports that their crime complaints are ignored by the police, their 911 calls are unanswered for hours, and some 911 calls end up with an arrest of the caller. Those arrests in turn can lead to detention for hours in a "fetid holding cell" in a police precinct for a minor offense.²³²

At the same time, aggressive policing tactics—stops and frisks, misdemeanor arrests, and summons activities—that characterized the NYPD's policing model for over two decades have been intensively applied in the Bronx, particularly in the special "Impact Zones" that include public housing developments.²³³ Courts have cited constitutional problems in those practices, ordered remedies, and awarded damages.²³⁴

"suffers from poor design, deteriorating structures, inadequate funding, a large concentration of poor people, isolation from social services, high crime rates, and cumbersome management"); Adam Carlis, Note, *The Illegality of Vertical Patrols*, 109 *Colum. L. Rev.* 2002, 2002–03 (2009) (noting an "intractable fear of the projects" has led to aggressive policing strategies within those communities).

234. New York City recently agreed to terminate the practice of vertical patrols and trespass abatement in both public housing and subsidized housing, stipulating to Fourth and Fourteenth Amendment violations in this practice. See *Stinson v. City of New York*, 282 F.R.D. 360, 383–84 (S.D.N.Y. 2012) (granting class certification for a § 1983 claim against the city and police officers for unconstitutional summonses); *Stipulation of Settlement and Order at 7–11, Ligon v. City of New York*, 12 Civ. 2274 (AT) (S.D.N.Y. Feb. 2, 2017), http://www.nyclu.org/sites/default/files/field_documents/ligon_settlement.pdf

The courts have found that few of those sanctions—stops, arrests, summonses—result in convictions or enforced summonses, as noted in the settlement in several of those lawsuits.²³⁵ Those that lead to arraignment often take years to resolve and burden defendants with repeated court appearances, lost days of work, childcare complications, days in detention, and a minor criminal record.²³⁶ The South Bronx precinct, known as the 4-0 (the 40th precinct), had the second-highest number of civilian complaints for officer misconduct (verbal abuse, physical abuse, and inaction in the face of citizen crime reports) in 2016.²³⁷ The Bronx also has the five precincts with the highest number of personal injury court claims alleging police misconduct adjusted for the local crime rate.²³⁸

A troubled court system that compounds the harms of petty police enforcement, underpolicing of murder and violent crime, perceived injustices of overpolicing of minor crimes with only tenuous connections

to major crimes, and perceived harassment and fear of violence has bred cynicism toward police, which leads Bronx citizens to withdraw from cooperation with police to solve crimes.²³⁹ As in L.A., citizens fear retribution if they cooperate with police, and police are unable to provide protection to break that particular chain; residents actively intervene to discourage others from reporting crimes or cooperating with the police.²⁴⁰ They carry the resentments of the policing model as a negative incentive—multiplied by fear of retaliation—and choose not to help the police. For example, when a young Black mother was killed by a stray bullet in 2016, Bronx detectives had no responses to a reward of \$2,500 posted for tips, a fraction of the reward offered for leads in the killing of a White jogger in a Queens precinct earlier in the year.²⁴¹

In New York City, as in L.A., perceived police injustices and indifference, persistent and unresolved cases of violence, and residents' cynicism and withdrawal are all implicated in the neighborhoods where murder persists even as the rest of the two cities become safer. This is not to say that the persistence of violent and drug crimes, often carried out by local gangs tied to specific housing developments, are not part of that ecology.²⁴² But the disconnect between citizens and police removes what might otherwise be a social process to undo the cycle.

There are signs of progress. To its credit—perhaps spurred into action by a *New York Times* series highlighting the inadequacy of investigative resources in the South Bronx—the NYPD recently announced plans to substantially reinforce the ranks of homicide investigators there.²⁴³

3. *Chicago*. — The homicide spike in Chicago since 2014—unprecedented in the city's last half century²⁴⁴—has coincided with revelations of serious institutional problems with the police department.

239. Mueller & Baker, *Rift Between Officers and Residents*, supra note 229 (noting “[d]etectives’ phones barely ring with tips”).

244. See supra Figures 3 & 4.

Both a citizen task force in Chicago and the DOJ CRD's recent investigations of the Chicago Police Department (CPD) revealed systemic problems of excessive force, deadly force, inadequate systems of accountability, unlawful detentions, and the absence of transparency in disciplinary practices for officer misconduct. As in New York and L.A., important commands in the city were understaffed. The two reports also note low morale among officers, complaints about insufficient training and support, and sharp criticism by the public.²⁴⁵ In addition to the Labor Day refusal-to-work incident,²⁴⁶ there are indicators of a pullback in proactive enforcement—street stops—by CPD officers in Chicago's highest-crime neighborhoods.²⁴⁷ A recent report by the Crime Lab at the University of Chicago showed an 80% drop in street stops (including investigative stops and *Terry* stops), from 50,000 stops per month to 10,000 stops per month, in the period from November 2015 to January 2016.²⁴⁸

The drop in stops preceded the sharp spike in homicides in Chicago by two months. Factors proposed for the cause of the decrease in stops included: the outcry by community and political leaders following the release of the video of the shooting of Laquan McDonald;²⁴⁹ the city's agreement with the ACLU of Northern Illinois requiring documentation of each stop;²⁵⁰ and a new state law, SB 1304, requiring police officers to issue a receipt to each person they stop.²⁵¹ Although Chicago

251. 725 Ill. Comp. Stat. Ann. 5/107-14 (West 2016); see also Police Reform Bill Passes the Illinois General Assembly, Cmty. Renewal Soc'y (June 3, 2015), <http://www.communityrenewalsociety.org/police-reform-bill-passes-illinois-general-assembly> [<http://perma.cc/2SPD-2KR7>] (interpreting the bill). In addition to requiring officers to issue receipts after street stops, SB 1304 set guidelines for body-worn cameras, required the

experienced a sharp decline in stops before its homicide spike, homicides in New York City did not increase following a similar decline in stops from 2012 through 2015. In fact, homicides there continued to decline in 2016 after a small uptick in 2015.²⁵² Perhaps there is some optimal number of stops in each city, but calculating that figure is indeed a challenge.

Chicago, then, seems to follow the same pattern as New York City's South Bronx neighborhood and South L.A.: Citizens who witness shootings and murders refuse to cooperate with police.²⁵³ Citizen trust in the police is low, and it is lowest in the South and West Side neighborhoods—places that are both the most heavily policed and the most in need of police protection and criminal investigations.²⁵⁴ At the same time that homicides go unsolved, citizens arrested for petty offenses spend long periods in jail awaiting court dates and then plead guilty to misdemeanors that lead to spells on probation, creating an even deeper wedge between citizens and police.²⁵⁵ This distrust breeds further violence by breaking the already threadbare ties between citizens and police, which then puts both citizens and police at some risk. Through dozens of interviews with adolescents and young adults on the West Side, Professor Craig Futterman and his colleagues captured the cycle of violence and distrust:

It is not often enough noted that law enforcement itself is among the major casualties of the lack of police accountability Distrust of the police sets in motion a cycle with devastating effects for our children's safety, sometimes with grave consequences. Because kids do not trust police, they will not call the police when they're in trouble. Because people will not cooperate with the police, the police cannot solve and prevent crimes. Because the police cannot solve and prevent crimes, residents are yet less likely to go to the police and more likely to look for resolution or restitution outside the law. In the absence of meaningful accountability, the cycle goes on and on,

creation of a database for police officer professional conduct, mandated independent investigations of officer-involved deaths, prohibited chokeholds, and implemented several other reforms to strengthen investigations and oversight of CPD. See Police Reform Bill Passes the Illinois General Assembly, *supra*.

reducing urban neighborhoods to something akin to failed states.²⁵⁶

Much of the violence in in these neighborhoods is common and deadly, often stemming from gang conflicts.²⁵⁷ Yet there are few exits from gang life and little incentive to exit even when one is available.²⁵⁸ Interpersonal disputes are often the spark for gang violence and killings.²⁵⁹ But gangs in Chicago also are complex organizations and heterogeneous in their makeup, with unemployed drug dealers and working men in the same groups.²⁶⁰ Income from drug sales is central to the economic lives of some in the gang, though certainly not for all.²⁶¹ While similar disputes and conflicts between local drug-dealing groups often spark murders in New York City,²⁶² gangs there are more concentrated in public housing developments,²⁶³ while in Chicago, gangs spread across the South and West Sides. Accordingly, there are fewer

gang conflicts in New York City simply by virtue of the smaller number of gangs.²⁶⁴

One other factor likely driving Chicago's spike in homicides is guns. Chicago's gun homicide rate in 2016 was 25.1 per 100,000 persons, nearly twice the rate of 14.7 in Philadelphia, the next-highest large city measured.²⁶⁵ At the same time, its non-gun homicide rate of 2.7 per 100,000 persons was comparable to the rates in Houston and Philadelphia, among the other largest cities in the United States.²⁶⁶ Gun availability in Chicago, as evidenced by gun seizures, is very high: Approximately 8,300 guns were seized in 2016.²⁶⁷ This is an increase of more than 30% from the 6,521 illegal guns seized by mid-December of the previous year and far above the 6,815 and 6,429 guns seized in 2013 and 2014, respectively.²⁶⁸ One gun per hour was seized in Chicago in the first six months of 2016; 100 guns were seized on Father's Day weekend alone.²⁶⁹ Most of the guns were seized in the South and West Sides, the areas of the city with the highest homicide rates. The volume of these seizures is startling in light of the pullback in policing and in *Terry* stops in Chicago—which has occurred even as the CPD has highlighted the connection between gun availability and murder.²⁷⁰

Most of Chicago's increase in homicides was in gun homicides, which rose from 261 in 2015 to 687 in 2016.²⁷¹ While gang disputes are a major source of gun homicides, gun robberies accounted for the major increase in robberies in 2016.²⁷² Chicago, in other words, like New York City in the 1980s, suffers not only from concentrated poverty and legal

cynicism among both citizens and police but also from a gun violence epidemic.²⁷³

Figure 5 shows the density of Federal Firearm Licensees and gun manufacturers within twenty miles of the Chicago city border as of January, 2016, about one year after the onset of the rise in Chicago gun homicides in 2015. The Bureau of Alcohol, Tobacco, Firearms and Explosives (ATF) issues firearms licenses (FFLs) to regulate the distribution and manufacture of firearms.²⁷⁴ Figure 5 shows that there were dozens of FFL licensees selling firearms within that perimeter, including several on the city border adjacent to the South and West Side areas where homicides are concentrated. Another cluster of dealers is concentrated within a few miles of the Indiana state line on Chicago's southern boundary.

Whether Chicago's crime guns are entering the city from these sources cannot be fully determined from DOJ gun trace data, since only a portion of crime guns are recovered and submitted for trace. But based on what is known, signs do point to crime guns entering the city from those dealers. One dealer, located near the southeast side of the city, sold over 1,500 crime guns in a five-year period from 2009 to 2013.²⁷⁵ Four nearby dealers accounted for 20% of the recovered crime guns in Chicago during this period.²⁷⁶ Together, dealers in Illinois and neighboring Indiana accounted for 11,874 recovered crime guns during this period, nearly 60% of the total.²⁷⁷ If Chicago is suffering from a gun homicide epidemic, these sources—arrayed in a pattern that may not be unique to Chicago²⁷⁸—might be thought of as one of the “pumps” that is infecting the neighborhoods with the instruments of murder.

FIGURE 5: CHICAGO AREA GUN DEALERS, JANUARY 2016²⁷⁹

In Chicago, the gun supply interacted with the social and economic contexts of the South and West Sides to animate the homicide epidemic of these past two years. Wherever the guns are sold, they seem to land in

279. This graph was created using ATF's data for FFL holders in Indiana and Illinois for January 2016. See Downloadable Lists of Federal Firearm Licensees (FFLs), ATF: Bureau of Alcohol, Tobacco, Firearms and Explosives, <http://www.atf.gov/firearms/listing-federal-firearms-licensees-ffls-2016> [<http://perma.cc/NPR9-SEFL>] (last updated Jan. 30, 2017) (data on file with the *Columbia Law Review*). The addresses were geocoded using World Geocoding Service through ArcGIS Mapping with ArcMap. See ArcGIS, ESRI, <http://www.arcgis.com/home/index.html> (last visited Apr. 14, 2017). Map boundaries for Chicago were downloaded from the City of Chicago. See City of Chicago, Data Portal: Boundaries - City, <http://data.cityofchicago.org/Facilities-Geographic-Boundaries/Boundaries-City/ewy2-6yfk> (data on file with the *Columbia Law Review*). Illinois boundary maps (shape files) were obtained from Illinois State Boundary, Illinois Geospatial Data Clearinghouse <http://clearinghouse.isgs.illinois.edu/data/reference/illinois-state-boundary> (data on file with the *Columbia Law Review*). Indiana boundaries were downloaded from TIGER/Line Shapefile, 2013, State, Indiana, Current County Subdivision State-based, Data.gov, <http://catalog.data.gov/dataset/tiger-line-shapefile-2013-state-indiana-current-county-subdivision-state-based> (data on file with the *Columbia Law Review*).

the poorest places and the places most susceptible to violence. The loss of faith in the police in the highest-homicide areas extends to a broader loss of faith in many of the city's institutions, from schools to courts to the police.²⁸⁰ Police abuse and impunity go hand in hand to create deeply felt cynicism among the residents.²⁸¹ Accompanying this despair is severe economic deprivation and isolation.²⁸² Like New York City and L.A. neighborhoods, Chicago's poorest and most violent neighborhoods also exemplify the concept of the poverty trap.²⁸³ The robust science showing the connections between neighborhoods and socioeconomic deprivation can be applied in multiples to Chicago: The extremes of its violence spike in the past two years mirror the extremes and the breadth of its concentrated poverty and segregation that has persisted over decades.

B. *Lessons and Next Steps*

In this symposium, Professor Meares echoes the President's Task Force on 21st Century Policing and concludes that police need to commit more to building trust within the communities they serve.²⁸⁴ She is hardly alone in this. In an October 2015 speech in Chicago, FBI Director Comey spoke of "two lines: one line is law enforcement and the other line is the folks we serve and protect, especially in communities of

280. See, e.g., Denisa R. Superville & Stephen Sawchuk, In Chicago School Funding Battles, Human Costs Are Steep, *EdWeek* (May 17, 2016), <http://www.edweek.org/ew/articles/2016/05/18/in-chicago-school-funding-battles-human-costs.html> (on file with the *Columbia Law Review*) (noting parents' frustration with the "tiered education system where students on the North Side and in selective-enrollment schools get needed resources while those on the West and South sides 'get the crumbs'").

283. Sampson & Morenoff, *supra* note 83, at 198–201 (describing the persistence of poverty and the durability of its social effects in Chicago neighborhoods).

284. Meares, *The Path Forward*, *supra* note 76.

color.”²⁸⁵ He worried that “those two lines are arcing away from each other, at an increasing rate.”²⁸⁶

This Essay contends that this extends to trust for homicide investigations. L.A., New York City and Chicago are not alone in experiencing low clearance rates owing in part to citizen distrust and withdrawal. The *Baltimore Sun* opined on the centrality of clearance rates for public safety:

Clearance rates in the United States have been in decline for years, but the national average is still better than 20 points higher than Baltimore’s rate Cases that aren’t cleared by police are too often cleared by the streets, leading to the type of reciprocal killings that plague Baltimore.²⁸⁷

Clearance rates matter in reassuring people that police are dedicated to their safety and that they can deliver on promises of security. This is especially important in an era of proactive policing, when there are implicit tradeoffs between aggressive policing and dignity.²⁸⁸ As these three case studies show, the trust and cooperation of citizens are essential to reducing murder by leveraging citizen cooperation in homicide investigations. Nearly fifteen years ago, as homicide rates were plunging in most cities, Professors Janice Plunket and Richard Lundman suggested that “the significantly lower clearance rates in Black census tracts and integrated census tracts are a function of less trust and less cooperation and information from citizens.”²⁸⁹ They noted, “[w]hen people are reluctant to talk to homicide detectives, when they are uneasy about telling homicide detectives what they saw, what they know, and what they suspect, the necessary result is lower clearance rates.”²⁹⁰

All three case studies point toward the importance for police to shift their focus from petty crimes, which have become the core of the new

policing, toward stronger efforts in homicide investigations. The lesson is that the most appropriate strategic response to homicide spikes, if not epidemics, may have less to do with the number of police than with how those police are deployed.²⁹¹

Homicide and nonfatal shootings in small social and physical spaces are contagious.²⁹² Many of the processes assumed to reflect the features of a place, a structural view, may actually be the product of social interactions that take place in those dense social spaces. This suggests a process of social contagion in which behaviors, attitudes, and beliefs are spread through social contacts: exchanges of status, conflict between or within social networks, or reciprocal perceptions of risk.²⁹³

Guns appear to be the “host” in homicide epidemics.²⁹⁴ Disrupting the retaliatory killings in dense social networks by removing murderers is

291. See Steven Mello, *Police and Crime: Evidence from COPS 2.0*, at 27 (2016) (unpublished manuscript), <http://ssrn.com/abstract=2812701> (on file with the *Columbia Law Review*) (reporting that increases in the number of police appear to reduce murders by a small fraction, between 0.3–0.4 per officer); see also Aaron Chalfin & Justin McCrary, *Are US Cities Underpoliced? Theory and Evidence* 35 (2013), http://eml.berkeley.edu/~jmccrary/chalfin_mccrary2013.pdf [<http://perma.cc/W4VT-ZVM5>] (discussing a series of measurement-error-corrected estimates and suggesting increases in police help to reduce violent crime, such as murder). In fact, the 2016 homicide clearance rate by the Baltimore Police Department was 38%, well below the national average of 62%. Adam May, *Baltimore County Police Clearing Homicides at Unprecedented Rate*, WBAL-TV (Dec. 29, 2016), <http://www.wbalv.com/article/baltimore-county-police-clearing-homicides-at-unprecedented-rate/8544960> [<http://perma.cc/9FSS-WVCZ>]. In contrast to the low clearance rate in the City of Baltimore, the clearance rate in the surrounding areas of Baltimore County was 82.4%. *Id.*

292. See, e.g., Green et al., *supra* note 257, at e6 (reporting that gunshot violence follows an process of social contagion that is transmitted through social interactions, with an influence that is greater than the vulnerabilities to violence from living in conditions of social isolation and economic deprivation); Andrew V. Papachristos, Christopher Wildeman & Elizabeth Roberto, *Tragic but Not Random: The Social Contagion of Nonfatal Gunshot Injuries*, 125 *Soc. Sci. & Med.* 139, 140 (2014) (finding “nonfatal gunshot injuries are far more concentrated than previously thought” and “the probability of victimization is strongly associated with network exposure to nonfatal gunshot victims,” leading to the inference that gun violence spreads through processes of social contagion . . . concentrated in risky networks and are associated with specific behaviors”).

Wilkinson & Jeffrey Fagan, *A Theory of Violent Events*, *in The Process and Structure of Crime: Criminal Events and Crime Analysis* 169, 178–80 (Robert F. Meier & Leslie W. Kennedy eds., 2001) (exploring the “situational contexts of violent events” and asserting “[v]iolent events appear to be situated transactions that reflect the interactions of the parties and the features of both the social and situational contexts”).

295. See Andrew V. Papachristos, Tracey L. Meares & Jeffrey Fagan, *Attention Felons: Evaluating Project Safe Neighborhoods in Chicago*, 4 *J. Empirical Legal Stud.* 223, 224 (2007) (discussing how Chicago’s Project Safe Neighborhoods program reduced homicide rates by more than 35%); Andrew V. Papachristos, Tracey L. Meares & Jeffrey Fagan, *Why Do Criminals Obey the Law? The Influence of Legitimacy and Social Networks on Active Gun Offenders*, 102 *J. Crim. L. & Criminology* 397, 399–400 (2012) (using studies conducted among active gun offenders to conclude that individuals in this group differed in perspective about compliance with the law); Danielle Wallace et al., *Desistance and Legitimacy: The Impact of Offender Notification Meetings on Recidivism Among High Risk Offenders*, 33 *J.Q.* 1237, 1239 (2015) (“Research supports the efficacy of crime prevention programs which incorporate procedural justice and legitimacy into a focused deterrence approach.”).

296. See Bell, *supra* note 205, at 5 (“The empirical evidence shows that these feelings of distrust manifest themselves in reduced likelihood among these groups to obey law enforcement officers’ commands, and to cooperate with officers to help them solve crimes.”); Mark Berg et al., *Cynical Streets: Neighborhood Social Processes and Perceptions of Criminal Injustice*, 54 *Criminology* 520, 521–22 (2016) (arguing that “negative or unfavorable police-citizen encounters are more likely to occur in neighborhoods with greater levels of cynicism”); Desmond et al., *Police Violence and Citizen Crime Reporting*, *supra* note 205, at 870 (finding “publicized cases of police

greater under the aggressive and proactive tactics of the “new policing.”²⁹⁷ Indeed, the risks of policing indignities in a community depend quite a bit on the city’s policing model—a model over which a community likely has little influence.²⁹⁸ But dignitarian insults are only one consequence of the new policing. An equally important cost is the loss of effectiveness in crime control. Two empirical studies of New York City’s aggressive policing model show few returns to crime control from saturated investigative stops. One study employed an experimental design to show that while a high rate of stops based on an expansive and subjective definition of reasonable suspicion had minimal effects on crime, a higher rate of stops based narrowly on factors approximating a probable cause standard substantially reduced crime.²⁹⁹ A second test used a longitudinal (panel) design and reached the same conclusion: Stops based on probable cause significantly reduce crime.³⁰⁰ Both studies argue for a shift in police practice away from inflated notions of suspicion and toward a more specific and narrow notion of “suspicion” based on probable cause. In New York City, the setting for these studies, the same expansive policing tactics generally did not recover weapons or contraband or lead to arrests of active offenders for felony crimes.³⁰¹

violence against unarmed black men have a clear and significant impact on citizen crime reporting”); Eric A. Stewart et al., *Neighborhood Racial Context and Perceptions of Police Based Racial Discrimination Among Black Youth*, 47 *Criminology* 487, 849–50 (2009) (recognizing that “neighborhood social context has been shown to be integral to shaping race relations, police behavior, and police-citizen encounters”).

297. See Jeffrey Fagan, *Dignity is the New Legitimacy*, in *The New Criminal Justice Thinking* 308, 313 (Sharon Dolovich & Alexandra Natapoff eds., 2017) (noting that “front-end encounters with the police under the ‘new policing’ are fertile grounds for petty or pointless indignities or gratuitous humiliations”); Jonathan Simon, *The Second Coming of Dignity*, in *The New Criminal Justice Thinking*, supra, 275, 281 (noting that the “severity of criminal justice treatment[] has created a gulf between the communities harmed and humiliated by criminal justice encounters and those that feel protected and respected by those encounters”); Bowers, supra note 213, at 992–95 (“In the age of order-maintenance policing . . . it is inevitable that some not insignificant number of low-level, full-custodial arrests reflects very bad choices (or worse).”); Jeffrey Fagan, *Indignities of Order Maintenance* 44 (2016) (unpublished manuscript) (on file with the *Columbia Law Review*) (noting that “indignities, including those that carry a racial component, can undermine the ties of citizens to law and the moral and social norms that underlie them”).

298. See Charles F. Sabel & William H. Simon, *The Duty for Responsible Administration and the Problem of Police Accountability*, 33 *Yale J. on Reg.* 165, 210–11 (2016) (finding “post-bureaucratic organization takes markedly different forms with correspondingly different implications for accountability”).

299. See MacDonald, Fagan & Geller, supra note 233.

300. See Jeffrey Fagan, *Terry’s Original Sin*, 2016 *U. Chi. Legal F.* 43, 46 (“The analyses show significant reduction in crime in neighborhoods . . . with greater numbers of probable cause stops, and ratios of probable cause stops to other stops.”).

301. See, e.g., *Floyd I*, 959 *F. Supp. 2d* 540, 573 (S.D.N.Y. 2013) (using statistical data to demonstrate the unlikelihood of discovering weapons or contraband); see also Meares, *Programming Errors*, supra note 44, at 162–63 (2015) (explaining the theory that stop and frisk carried out “en masse as a program” is inconsistent with *Terry’s* authorization for such stops in the case of individual incidents).

The new policing logic focuses on the wrong behaviors and externalizes inefficiency costs to impacted citizens in the form of pointless stops and a range of perceived injustices. The turn to an investigative model can reverse the distraction of police from minor crimes and infractions and restore focus on violence and murder. In other words, if police do not “sweat the little stuff” but rather “go after the hard stuff,” they will reap dividends in the trust and cooperation of the people most affected by that violence.

CONCLUSION

All too many cities experienced recent increases in homicides. This Essay suggests that, given existing information, there is no reason to believe that these increases presage a new homicide epidemic and a return to the era of elevated homicide rates that persisted in many U.S. cities over three decades through the mid-1990s. These spikes could be momentary upticks in the long-term decline that has been ongoing for over two decades; they could also signal a new era of unpredictable and random surges and declines in homicide across cities during an otherwise stable pattern over time.

Homicide spikes appear to be more volatile in smaller cities, with the exception of the recent severe homicide outbreak in Chicago. Closer examination of the conditions in neighborhoods in three large cities shows the intersection of policing tactics and social contexts in which the concurrent withdrawal of citizens and police from the co-production of security has profound consequences for the control of violence. This Essay argues for a shift in policing tactics from order maintenance and proactive police contacts—with their potential to produce injustices and indignities—to a focus on investigations of homicide, with the promise both of bringing offenders to justice and of restoring trust in the police.
